

Guide for **Affordable Care Act (ACA) Information Returns (AIR) Submission**

Composition and Reference Guide

PROCESSING YEAR 2025
PUBLICATION 5258

Last Updated 08/27/2024

Change/Document History

It will be assured that this document is current. Printed documents and locally copied files may become obsolete due to changes to the master document.

Date	Summary of Changes	Changes Marked
06/12/2024	Updated Appendix B Page 146 Replace airmailbox@irs.gov with AIR Help Desk- 1-866-937-4130	No
06/12/2024	Corrected formatting issues and grammar throughout publication	No

Table of Contents

Section 1 Introduction	2
1.1 Identification	2
1.2 Scope	2
1.3 Purpose	3
1.4 Related Documents	3
Section 2 Interface Overview	5
2.1 ISS-UI Channel	6
2.2 ISS-A2A Channel	6
Section 3 Composing IRS ACA Information Returns Transmission	8
3.1 Namespace and Prefix	8
3.2 Guidelines for Composing IRS Form Data File	10
3.3 IRS Form Data File Naming Convention	11
3.4 Structure of IRS Form Data File	12
3.4.1 Manifest Transmission XML Elements	13
3.4.2 Uniquely Identifying Transmissions, Submissions, and Records	15
3.4.3 Computing Checksum	18
Section 4 Transmitting IRS ACA Form Data File and Retrieving Acknowledgment via the ISS-UI Channel	20
4.1 Transmitter Operations	20
4.2 Transmitting UI Files to IRS	21
4.2.1 Sample Manifest File	23
4.2.2 Sample Form Data File	26
4.3 Retrieving Acknowledgment from IRS	30

4.4 Transmitter IRS Form Data File Specification	32
4.5 Transmitting Information Returns to IRS	32
4.5.1 Validation of IRS Form Data File	33
4.5.2 Processing of IRS Form Data File	33
4.6 Retrieving Status of the Transmission through UI	34
4.7 IRS Error Data File	35
4.8 UI Channel TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 Schemas	38
4.9 4.9 Calculate AttachmentByteSizeNum for TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024	38
<hr/>	
Section 5 Transmitting IRS ACA Form Data File and Retrieving Acknowledgment via the ISS-A2A Channel	40
5.1 Message Compression	40
5.2 Basic SOAP Message Structure	40
5.2.1 Creating the SOAP Envelope	41
5.2.2 SQL Injection in the SOAP Message	42
5.3 SOAP Header	43
5.3.1 WS-Security	43

5.3.3 ACA AIR Transmission Manifest	54
5.4 SOAP Body	54
5.4.1 Message Attachment File Format	54
5.4.2 Message Attachment Content Type	55
5.5 ISS-A2A Web Services Summary	55
5.5.1 Overview of Transmission and Submission	56
5.5.2 IRS-ACA Submit Transmission Request Message	58
5.5.3 IRS-ACA Retrieve Acknowledgement Request Message	60
5.5.4 A2A Channel TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 Schema/WSDL Guidance	62

Section 6 Identifying Transmissions and Records	64
6.1 Identifying the Transmission Type	64
6.2 Identifying the Transmission Status (Acknowledgement)	66
6.3 Receipt ID or UTID as Basis for Uniquely Identifying Transmissions and Records	68
6.3.1 Uniquely Identifying Forms 1094 within a Transmission	70
6.3.2 Uniquely Identifying Forms 1095 within a Transmission	71
6.4 Identifying Records with Errors	72
6.5 Corrections and Replacements	73
6.5.1 The Correction Process	73
6.5.2 Transmitting Corrections	75
6.5.3 Transmitting Form 1094-C Corrections (Authoritative Transmittals Only)	75
6.5.4 Transmitting Forms 1095-B or 1095-C Corrections	76
6.5.5 Transmitting Forms 1094-C and Forms 1095-C Corrections	76
6.6 Rejected Transmissions	77
6.6.1 Transmissions Rejected by IRS Portal	77
6.6.2 Transmissions/Submissions Rejected by AIR	77
6.7 Replacement Process - Transmitting Replacements	78
6.7.1 Replacement Transmission	79
6.7.2 Replacement Submission	82
 Section 7 Data Mapping for ISS-UI Services/ISS-A2A Web Services	 86
7.1 Data Mapping – Message Data Boundary	87
7.2 Data Mapping – Form Data Boundary	91
 Section 8 Example ISS-A2A Web Service Messages	 106
8.1 Transmitter Services SOAP Message Elements	106
8.1.1 IRS-ACASubmitService SOAP Request Message – Manifest Header (ACAGetTransmitterBulkRequestService.wsdl)	106
8.1.2 IRS-ACASubmitService SOAP Request Message – Form Data File (ACAGetTransmitterBulkRequestService.wsdl)	108

8.1.3 IRS-ACASubmitService SOAP Response Message (ACAGetTransmitterBulkRequestService.wsdl)	112
8.1.4 IRS-ACAACKngService SOAP Request Message (ACAGetTransmitterBulkRequestStatus.wsdl)	113
8.1.5 IRS-ACAACKngService SOAP Response Message – Manifest Header (ACAGetTransmitterBulkRequestStatus.wsdl)	113
8.1.6 IRS- ACAACKngService SOAP Response Message – Error Data File (ACAGetTransmitterBulkRequestStatus.wsdl)	114
Section 9 General Philosophy on Data Elements in XML Schemas	116
Section 10 Validating a Transmission against XML Schema	118

Section

1

Section 1 Introduction

The ACA Information Returns (AIR) Project is responsible for delivering applications, infrastructure, and supporting processes required to process information returns. In January 2016, filing Forms 1094/1095-B and Forms 1094/1095-C became mandatory. Internal Revenue Service (IRS) will begin accepting TY2024 Forms 1094/1095-B and Forms 1094/1095-C, as well as original prior year forms and corrections, in January 2025.

AIR has two transmission methods: An Application-to-Application (A2A) channel and a Web Browser-based User Interface (UI) channel. AIR will perform structural and initial data validations on the information returns. Both the A2A and UI channels will also support requests for status responses (was the transmission accepted or rejected).

1.1 | Identification

The purpose of this document is to provide guidance to all types of external transmitters about composing and successfully transmitting compliant submissions to IRS. The audience of this document is:

- **Issuer** – A business filing their own ACA Information Returns regardless of whether they are required to file electronically (transmit 10 or more of the same type of information return) or volunteer to file electronically. The term issuer includes any person required to report coverage on Form 1095-B and any applicable large employer required to report offers of coverage on Form 1095-C and file associated transmittals Form 1094-B or 1094-C.
- Proposed Treas. Reg. [REG-102951-16] reduces the threshold from 10 to 100 and requires corrected information returns to be filed in the same manner as original information returns.
- **Transmitter** – A third-party sending the electronic information return data directly to IRS on behalf of any business required to file. (Note: If you are transmitting returns for your own business, in addition to transmitting returns on behalf of another business, you do not need both the Transmitter and Issuer role. You can file all returns as a Transmitter.)
- **Software Developer** – An organization writing either origination or transmission software according to IRS specifications.

Issuers, Transmitters, and Software Developers are collectively referred to as transmitters throughout this document. Please note that not all transmitters are software developers and vice versa, but some of them can be both.

1.2 | Scope

This document covers details on composing and submitting Forms 1094/1095-B and Forms 1094/1095-C by transmitters to IRS. The scope of the document addresses the A2A-application based via SOAP messages exchanged between client and exposed Web Service endpoints and the Web UI-browser-based requiring human initiation. This publication is a living document that will be amended and updated each Tax Year/Filing Season and as deemed necessary.

When updates are made to the schema package for the A2A and UI channels, this publication will be updated accordingly.

AIR accepts the following information return transmittals and documents for TY2015 through TY2024 in

Processing Year (PY) 2025:

- Form 1094-B, Transmittal of Health Coverage Information Returns
- Form 1095-B, Health Coverage
- Form 1094-C, Transmittal of Employer-Provided Health Insurance Offer and Coverage Information Returns
- Form 1095-C, Employer-Provided Health Insurance Offer and Coverage

AIR will process each submission, provide a status and detailed Acknowledgement for the Transmitter. Generally, the Forms 1095-B and 1095-C will be submitted with their associated transmittals, Forms 1094-B and 1094-C. However, in the case where a previously submitted and processed Form 1094-C, Authoritative Transmittal, requires a correction, the corrected Form 1094-C, Authoritative Transmittal, must be submitted alone without any accompanying Form 1095-C records.

1.3 | Purpose

The purpose of this document is to provide sufficient technical information to the transmitters so that they are able to compose and submit valid submissions comprised of Forms 1094/1095-B and Forms 1094/1095-C. The document addresses how the Receipt ID is transmitted from AIR to the Transmitter, as part of the synchronous session initiated by the Transmitter to submit the submission, and how the Receipt ID forms the basis for uniquely identifying Form 1094 and Form 1095 records within a transmission.

Section

2

Section 2 Interface Overview

The data is exchanged between Transmitters and IRS via Simple Object Access Protocol (SOAP) messages with Message Transmission Optimization Mechanism (MTOM) attachment or via XML file upload using the Transmitter's web browser. MTOM is a World Wide Web Consortium (W3C) standard that provides a method of efficiently sending binary data to and from Web services. The SOAP data structures and XML Schema are specified in this document. As illustrated in Figure 2-1, there are two data communication channels between the external clients and IRS.

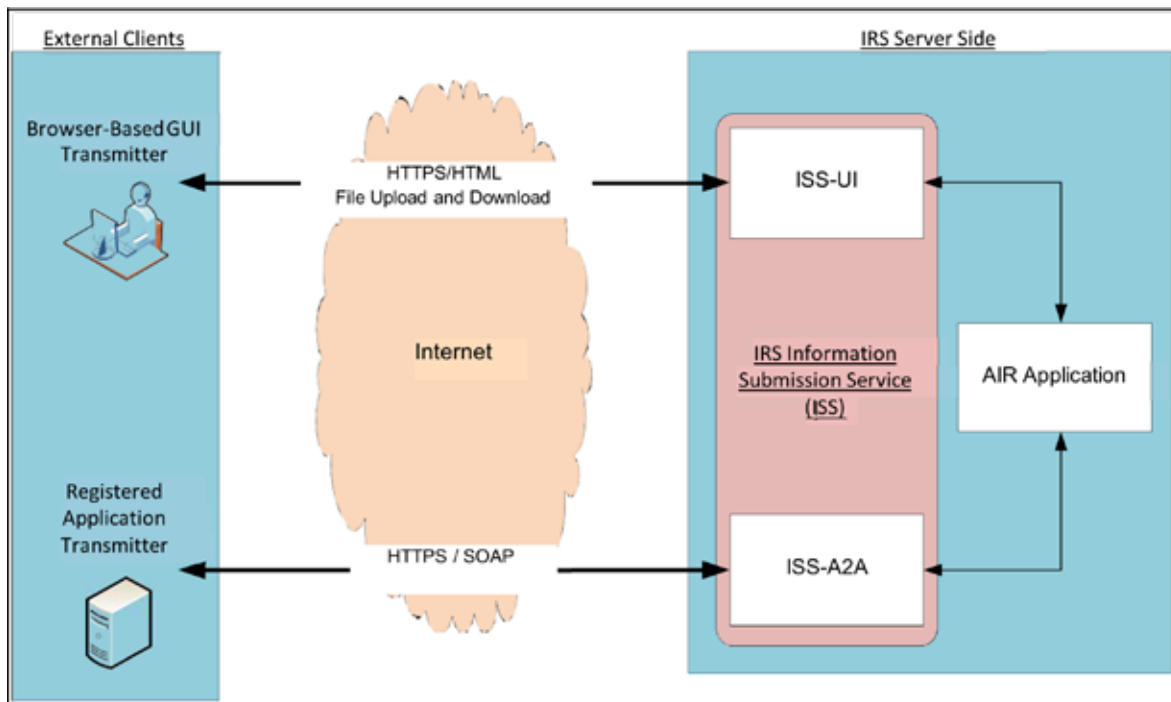

Figure 2-1: External Clients and IRS AIR

2.1 | ISS-UI Channel

In this channel, information returns are uploaded as XML files using the HyperText Transfer Protocol (HTTP) over Transport Layer Security (TLS 1.2). A user interface is exposed in IRS portal where a user will login and, if authenticated and authorized, will be allowed to upload files containing information returns.

Both Schemas and sample XML are part of the schema package posted on IRS.gov.

Transmitters must upload two XML files:

1. Manifest file: To create Request Manifest file: Transmitters should use Schema IRSACAUserInterfaceHeaderMessage.xsd to add/create “ACA Business Header” and “Request Manifest Details”

```
<xsd:element ref="acabushdr:ACABusinessHeader"/>
```

```
<xsd:element ref="ACATransmitterManifestReqDtl" />
```

- Element ACABusinessHeader definition defined in IRSACABusinessHeaderMessage.xsd
- Element ACATransmitterManifestReqDtl definition defined in IRS-EXT-ACA-AIR- 1094BC.xsd

2. Form Data File: (1094/1095-[B,C])

- IRS-Form1094-1095BTransmitterUpstreamMessage.xsd
- IRS-Form1094-1095CTransmitterUpstreamMessage.xsd

Note: The Manifest file is created using the “IRS-ACAUserInterfaceHeaderMessage.xsd”, which is uploaded via the ISS-UI Channel. The resulting Manifest file will include both the Manifest Header and the ACA Business Header and will be ready to upload.

2.2 | ISS-A2A Channel

In this channel, information returns are sent as SOAP messages with a MTOM-encoded attachment and gzip compression (see Section 5.1 for more details on HTTP Message Compression) using the SOAP Web Services request-response model. A web service endpoint is exposed in the external-facing IRS portal. The SOAP message will carry the credentials for authentication and authorization. The information returns are transmitted in the file as the **MTOM-encoded** attachment.

All external partner communication will need to support encryption using TLS v1.2 or greater in accordance with Federal Information Processing Standards (FIPS) **Publication 140-3**. Compliant cryptography will be used for strong and secure communication between Transmitters and IRS.

Section

3

Section 3 Composing IRS ACA Information Returns Transmission

An IRS transmission consist of two parts: The Manifest and the Form Data File.

- The Manifest contains information about the transmitter, transmission and the payload
- The Form Data File contains one or more submissions in XML format
- A submission is either:
 - One Form 1094-B and one or more Form 1095-Bs or
 - One Form 1094-C and one or more Form 1095-Cs or
 - One Form 1094-C, Authoritative Transmittal, and zero Form 1095-Cs, whenever the Form 1094-C, Authoritative Transmittal, is marked as a correction (for a previously submitted 1094-C)

Each transmission will have either Forms 1094/1095-B or Forms 1094/1095-C. The transmission may not contain comingled B and C submissions. This section covers composing the Form Data File and namespace prefix. In the context of Forms 1095-B and 1095-C, the recipient is referred to as payee.

3.1 | Namespace and Prefix

XML namespaces are used for providing uniquely named elements and attributes in an XML document. An XML instance may contain element or attribute names from more than one XML vocabulary. If each vocabulary is given a namespace, the ambiguity between identically named elements or attributes can be resolved to avoid collisions that can occur when markup intended for another software package uses the same element name or attribute name.

The following table identifies the target namespace associated with the various prefixes for ACA Forms 1094/1095-B and Forms 1094/1095-C request and response messages.

Namespaces may change between versions of IRS-published schemas. The most recent IRS published schemas must always be used.

Note: Transmitters can assign their own prefix to each namespace, but should make sure that the usage matches the definition throughout the document. Namespaces and prefix must be declared at the beginning of the payload and manifest files in order for AIR to process the transmissions properly.

Table 3-1: Prefix and Target Namespaces

Namespace	Prefix	Uses
urn:us:gov:treasury:irs:srv:gettransmitterbulkrequest	acaSoapReq	SOAP message
urn:us:gov:treasury:irs:msg:irsacabulkrequesttransmitter	acaBodyReq	SOAP message
urn:us:gov:treasury:irs:msg:acabusinessheader	acaBusHeader	SOAP message
urn:us:gov:treasury:irs:msg:acasecurityheader	acaSec	SOAP message
urn:us:gov:treasury:irs:msg:irstransmitterstatusrequest	acaStsReq	SOAP message
urn:us:gov:treasury:irs:common	irs	SOAP message
urn:us:gov:treasury:irs:ext:aca:air:tyYY ¹		Form
urn:us:gov:treasury:irs:msg:form1094-1095BCtransmittermessage	form109495BC	Error Data File
urn:us:gov:treasury:irs:msg:form10941095Btransmitterupstream message	form109495B	SOAP message
urn:us:gov:treasury:irs:msg:form10941095Ctransmitterupstream message	form109495C	SOAP message

¹ To account for prior, current and for future Tax Year (TY) and Filing Season (FS) updates -Insert the associated "Tax Year (i.e. tyYY for example ty21) will have the associated Processing Year "22"

3.2 | Guidelines for Composing IRS Form Data File

The content file or payload contains transmittals, (i.e. Form 1094) along with one or more associated Forms 1095. Below are general guidelines for composing the Form Data File which contains either Forms 1094/1095-B submissions or Forms 1094/1095-C submissions, but not both:

1. The Form Data File can only contain valid uncompressed and unencrypted XML
2. The Form Data File cannot exceed 100 MB in size
3. Only one IRS Form Data File is allowed as an attachment to a transmission
4. A submission structure consists of a Form 1094 (transmittal) and one or more associated Form 1095 records according to the following rules:
 - A Form 1094-B transmittal and at least one or more Form 1095-B
 - A Form 1094-C transmittal and at least one or more Form 1095-C (Exception – A Form 1094-C, Authoritative Transmittal, can be submitted without including a Form 1095-C and still be considered a valid submission, only in the case where the Form 1094-C, Authoritative Transmittal, is a correction to a previously submitted and processed Form 1094-C. Corrected Forms 1094C, Authoritative Transmittal, must be submitted without including any Forms 1095-C)
5. A transmission will contain at least one submission or as many as the 100 MB maximum payload file size allows
6. A transmission cannot comingle Forms 1094/1095-B submissions and Forms 1094/1095-C submissions otherwise it will be rejected
7. The XML Schema requires two attributes that when missing cause a transmission to be rejected by IRS. The following attributes are defined in the XML Schema and must be present on each record in the Form Data File:

```
<xsd:attribute name="recordType" type="xsd:string" use="required"/>
<xsd:attribute name="lineNum" type="xsd:integer" use="required"/>
```

For every record, recordType must be "String" (word) or "" and lineNum must be 0 (zero). The content files Root elements: must have the attributes as depicted and highlighted for the Form1094BUpstreamDetail:

```
<?xml version="1.0" encoding="UTF-8"?>
<n1:Form109495BTransmittalUpstream
  xmlns="urn:us:gov:treasury:irs:ext:aca:air:tyYY"
  xmlns:irs="urn:us:gov:treasury:irs:common"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:n1="urn:us:gov:treasury:irs:msg:form1094-1095Btransmitterupstreammessage"
  xsi:schemaLocation="urn:us:gov:treasury:irs:msg:form10941095Btransmitterupstreammessage IRS-Form1094-1095BTransmitterUpstreamMessage.xsd">
  <Form1094BUpstreamDetail recordType="String" lineNum="0">
    <SubmissionId>1</SubmissionId>
    <irs:TaxYr>2021</irs:TaxYr>
```

Each 1095 record must also have the attributes as depicted and highlighted for the Form1095CUpstreamDetail below:

```
<Form1095CUpstreamDetail recordType="String" lineNum="0">
  <RecordId>1</RecordId>
```

3.3 | IRS Form Data File Naming Convention

The Form Data file naming convention defined in the efile [AIRDocumentSystemFileNmType](#) includes the Form Type, a static indicator (Request), the Transmitter Control Code (TCC), the date and Greenwich Mean Time (GMT) the transmitter submits the file. The name specifically includes the following components:

```
1094<form type>_Request_<TCC>_<Date>T<TimeStamp>Z.xml
```

For example:

```
1094B_Request_XXXXX_20140101T010102000Z.xml
```

```
1094C_Request_XXXXX_20140101T010102000Z.xml
```

(Note: Please use the timezone generated by your system and not the example provided here.)

The XML naming pattern to be used to create Form Data files is as follows:

```
<xsd:pattern value="1094[B|C]_Request_[B-DF-HJ-NP-TV-Z]{2}[B-DF-HJ-NP-TV-Z0-9]{3}_[1-9][0-9]{3}(0[1-9]|1[0-2])(0[1-9]|1[1-2][0-9]|3[0-1])T(0[0-9]|1[0-9]|2[0-3])(0[0-9]|1[1-5][0-9])(0[0-9]|1[1-5][0-9])[0-9]{3}Z.xml">
</xsd:pattern>
```

3.4 | Structure of IRS Form Data File

```

Form Data File
  Submission #1
    Form 1094
      Form 1095
      Form 1095
  Submission #2
    Form 1094
      Form 1095
  Submission #3
    Form 1094
      Form 1095
      Form 1095
      Form 1095

```

The Form Data File is structured in a hierarchical fashion, i.e. the file contains one or more submissions. Each submission will have exactly one Form 1094 and one or more associated Form 1095 (Exception: Form 1094-C, Authoritative Transmittal, must be submitted alone when the transmittal is marked as a correction). In the example shown below there are total of three submissions with 2, 1, and 3 Form 1095 records respectively:

Figure 3-1: Structure of IRS Form Data File [B and C]

3.4.1 | Manifest Transmission XML Elements

The following table provides details of XML elements that the XML Schema requires in the Manifest Header of the SOAP message when transmitting information returns to IRS.

Table 3-2: Transmission Manifest XML Elements

Element Name	eFile Type	eFile Type Definition	Required?	Min Occurs	Max Occurs	Description
PaymentYr	YearType	string pattern "[1-9][0-9]{3}"	Yes	1	1	This is the tax year for which the information return is being reported.
PriorYear DataInd	DigitBooleanType	enumerated string value="0" value="1"	Yes	1	1	"0" for current filing year "1" for prior filing year
EIN	EINType	string pattern "[0-9]{9}"	Yes	1	1	Employer Identification Number belonging to the transmitter
Transmission TypeCd	Transmission TypeCdType	enumerated string value="O" value="C" value="R"	Yes	1	1	Type of records: "O" – Original "C" – Correction "R" – Replacement
TestFileCd	TestFile CdType	string pattern "([TP])?"	Yes	1	1	"T" – AATS "P" – Production
OriginalReceiptId	OriginalReceiptIdType	pattern "[^\s].{1,80}"	No	0	1	Reference to the
ReceiptId	ReceiptId Type	"[^\s].{1,80}" /> maxLength value="80"				Receipt ID of the transmission for which replacement transmissions are submitted - Do not include XML tags on transmissions with original records
Transmitter Foreign EntityInd	DigitBoolean Type	enumerated string value="0" value="1"	No	0	1	"1" identifies the transmitter as a foreign entity, do not include XML tags or have "0" as an indicator if transmitter is not a foreign entity

Element Name	eFile Type	eFile Type Definition	Required?	Min Occurs	Max Occurs	Description
Transmitter NameGrp	Business NameType	Complex Element	Yes	1	1	The transmitter's name
Company Information Grp	CompanyInformationGrpType	Complex Element	Yes	1	1	The transmitter address, name of the company to contact, and phone number to call
VendorInformationGrp	VendorInformationGrpType	Complex Element	Yes	1	1	Identifies if software was developed by a vendor (V) or inhouse (I) as well as contact information regarding the software
TotalPayee RecordCnt	TotalNumber Type	nonNegativeInteger	Yes	1	1	The total number of Forms 1095 included in the entire transmission
TotalPayer RecordCnt	TotalNumber Type	positiveInteger	Yes	1	1	The total number of Forms 1094 included in the entire transmission
SoftwareId	SoftwareId Number Type	"StringWithNoHashCode" haracterType" maxLength value="10"	Yes	1	1	The Software ID assigned to the software when the software was registered with IRS
FormTypeCd	FormName Type	enumerated string value="1094/1095B" value="1094/1095C"	Yes	1	1	Will contain "1094/1095B" if Forms 1094/1095-B are included in the transmission or "1094/1095C" if Forms 1094/1095-C are included in the transmission

Element Name	eFile Type	eFile Type Definition	Required?	Min Occurs	Max Occurs	Description
BinaryFormCd	BinaryFormat CodeType	enumerated string value="application / xml"	Yes	1	1	Will contain "application/xml"
Checksum Augmentation Num	SHA256Type	string pattern "[0-9A-Fa-f]{64}"	Yes	1	1	The SHA256 Checksum computed on the Form Data File attached to the transmission
Attachment ByteSizeNum	Attachment ByteSize NumType	string "([1-9]{1}[0-9]{0,}) ([0])"/>max Length = 12	Yes	1	1	The size in bytes of the Form Data File attached to the transmission
Document System FileNm	AIRDocument System FileNmType	String value="1094[B C]_Request_[B-DF-HJ-NP-TV-Z]{2}[B-DF-HJ-NP-TV-Z0-9]{3}_[1-9][0-9]{3}(0[19] 1[0-2])(0[1-9] 1[1-2][0-9] 3[0-1])T(0[0-9] 1[0-9] 2[0-3])(0[0-9] 1[1-5][0-9])(0[0-9] 1[1-5][0-9])[0-9]{3}Z.xml"	Yes	1	1	The name of the Form Data File attached to the transmission

3.4.2 | Uniquely Identifying Transmissions, Submissions, and Records

The XML Schemas for Forms 1094/1095-B and Forms 1094/1095-C include elements designed to uniquely identify ACA Information Returns transmission, submission within the transmission, and records within the submission. The transmitter that generates the Form Data File for transmissions to IRS must generate these IDs and maintain them along with their associated transmissions. Unique IDs are used to simplify and increase the precision of communications, corrections, and replacements.

The Transmitter will uniquely identify each transmission by the **Unique Transmission Identifier (UTID)** in the header.

The format for the UTID includes various fields separated by colons (:) is as follows:

- **UUID** – a **universally unique identifier** (UUID) is an identifier standard defined by the Internet Engineering Task Force (IETF) in Request For Comments (RFC) 4122. The UUID consists of a 16-octet (128-bit) number. This is a mandatory field. In its canonical form, a UUID is represented by 32 hexadecimal digits, displayed in five groups separated by hyphens, in the form 8-4-4-4-12 for a total of

36 characters (32 digits and four hyphens). For example:

550e8400-e29b-41d4-a716-44665540000

- **Application ID** – the Application ID will be **SYS12** and is a mandatory field.
- **Transmitter Control Code** – is 5 characters alphanumeric field that will contain the Transmitter's TCC and is mandatory – enter the TCC that IRS assigned when the Transmitter applied to electronically file Forms 1094/1095-B and Forms 1094/1095-C. Note: TCCs do not include lower case characters.
- **Reserved** – is an empty field
- **Request Type** – the Request Type defines the types of request which must be “T” (Transactional) and is mandatory

The UTID for the transmission will always be 51 bytes (see Figure 3-2: Unique Transmission Identifier below):

Unique Transmission Identifier (UTID)

Figure 3-2: Unique Transmission Identifier (UTID)

A transmission will contain one or more Forms 1094/1095-B submissions (transmittals/payee records) or one or more Forms 1094/1095-C submissions (transmittals/payee records) or only one Form 1094-C, Authoritative Transmittal (when marked as a correction for a previously submitted Form 1094-C). A transmission may not contain comingled B and C submissions. The Submission Identifier (SID) construct is applicable to all submissions (Forms 1094) within a transmission whether that transmission contains B or C Information Returns. Each submission will include a SID that will start at one and increment by one for each subsequent submission in the transmission.

SID = 1,2,3,4,5...

A submission will contain one or more Form 1095 Information Returns along with its corresponding Transmittal Form 1094. A Corrected 1094-C submission may not have Form 1095-C information. The Record Identifier (RID) construct is applicable to all Form 1095 records within a submission, regardless of whether that Submission contains Forms 1095-B or Forms 1095-C Information Returns. Each Form 1095 record in a submission will include a RID that will start at one and increment by one for every subsequent record in the submission.

RID = 1,2,3,4..n (e.g. 2, 17, 31, 86, 1023,9842, ...)

RECEIPTID = 1094B-20-00001234
RECEIPTID = 1094C-20-00044923
RECEIPTID = 1094C-20-00000385

When IRS successfully receives a transmission for processing, a unique Receipt ID is generated by IRS which uniquely identifies the transmission. The Receipt ID is used by the transmitter to retrieve the processing status of the transmission after it is processed. In addition, IRS uses the Receipt ID along with the submission and record IDs to uniquely identify the records in a transmission.

When an error is identified, both Form 1094 and Form 1095 records are uniquely identified within a transmission by concatenating the Receipt ID, SID, and RID (as applicable) and returning them to the transmitter as follows:

UniqueSubmissionId = RECEIPTID | SID
UniqueRecordId = RECEIPTID | SID | RID

Unique Submission Identifier (USID) and Unique Record Identifier (URID) enable:

- IRS to report errors to transmitters that are clearly related to the specific record(s) within the submission and the transmission
- Transmitters to send corrected records to IRS precisely identifying the record to be corrected
- Both IRS and transmitters to track transmissions and submissions

For example, the Form 1094 data located in submission 12 of a transmission would have a USID as follows:

Unique Submission Identifier (USID)

Figure 3-3: Unique Submission Identifier

The 1095 data located in record 98 of submission 12 of a transmission would have a URID as follows:

Unique Record Identifier (URID)

Figure 3-4: Unique Record Identifier

3.4.3 | Computing Checksum

All transmissions (Production and AATS) must use the SHA-256 Checksum algorithm. There are many algorithms readily available that can be used to calculate a SHA-256 Checksum:

- The algorithm that a transmitter uses will differ depending on their technology stack. For example, if the transmitter is building the interface on Windows/.NET Framework, they will need to obtain a SHA-256 Checksum algorithm that runs on the Windows platform. If the transmitter is building their interface on Linux/Java, they will need to obtain a SHA- 256 Checksum that runs on the Linux platform.
- Element checksum at manifest - algorithm should be SHA-256 which will generate 64 characters. Every transmission “Checksum” value should be 64 characters. Checksum will be used to identify duplicate transmissions “Accepted”, “Accepted with Errors” and “Partially Accepted”.

Section

4

Section 4 Transmitting IRS ACA Form Data File and Retrieving Acknowledgment via the ISS-UI Channel

The ISS-UI Channel is a Web Browser based user interface that allows transmitters to submit Form Data Files to IRS and retrieve acknowledgments. The purpose of this section is to describe the requirements for submitting an ACA Information Return Form Data File to IRS via the UI Channel.

4.1 | Transmitter Operations

As shown below, Figure 4-1: ISS-UI Channel Features, the operations available to transmitters, provided by the ISS-UI Channel are: A) Upload ACA Forms, and B) Check Transmission Status.

Figure 4-1: ISS-UI Channel Features

4.2 | Transmitting UI Files to IRS

Figure 4-2: ISS-UI Channel Transmission Submission Screen, shows the capability of the ISS- UI Channel that allows a transmitter to upload the Manifest file and the associated Form Data File containing either Forms 1094/1095-B or Forms 1094/1095-C submissions. The number of records that can be included in the Form Data File is only constrained by the 100 MB file size limit. The transmitter will have to provide information about the transmission, and the transmission itself, through ISS-UI channel. The transmitter provides a UTID in the transmission manifest file which will be uploaded along with transmission file. IRS recommends that external users validate their XML files against the schemas provided by IRS prior to submitting them to IRS. Taking this step will help avoid discovering errors after the XML file is submitted.

Performing this validation on the user end makes it easier and faster to identify and locate schema errors. Any tool which allows the external user to validate their XML files against the schemas, such as “Altova XMLSpy” or “SoapUI” should be suitable.

Once the transmission Manifest and transmission files are uploaded and validated by IRS, IRS generates a Receipt ID which will be displayed to the transmitter. The Receipt ID is used to retrieve the Acknowledgement after the transmission is processed. It is also used in combination with other identifiers to uniquely identify records in a transmission.

Note: It is very important that the Receipt ID be recorded and associated with the correct transmission. It will be needed to retrieve acknowledgements and may be needed for any corrections or replacements.

[Contact Us](#) | [Home](#) | [Logout](#)

ACA Transmission File Upload

Upload Manifest

Browse for your Manifest file in XML format.

Note: Only one Manifest file may be selected to coincide with this transmission.

Manifest File

Upload Form

Browse for your Form file containing Form 1094B and all associated 1095Bs or Form 1094C and all associated 1095Cs in XML format. Once you have selected your files select "Transmit" to process the transmission.

Note: Only one Form file may be selected to coincide with this transmission. Your total transmission file size may not exceed 100MB and may only include XML file types.

Form File

Transmission

Once you click "Transmit", you will NOT be able to cancel your transmission.

If your file is successfully received after clicking "Transmit", a confirmation page will appear that contains the Receipt ID for this transmission. It is recommended that you save your Receipt ID in a secure location. If there was a problem with your file, an error page will be shown. Please correct the problem and try your transmission again.

Note: Due to file size limitations, please allow sufficient time for larger Form files to be transmitted.

Figure 4-2: ISS-UI Channel Transmission Submission Screen

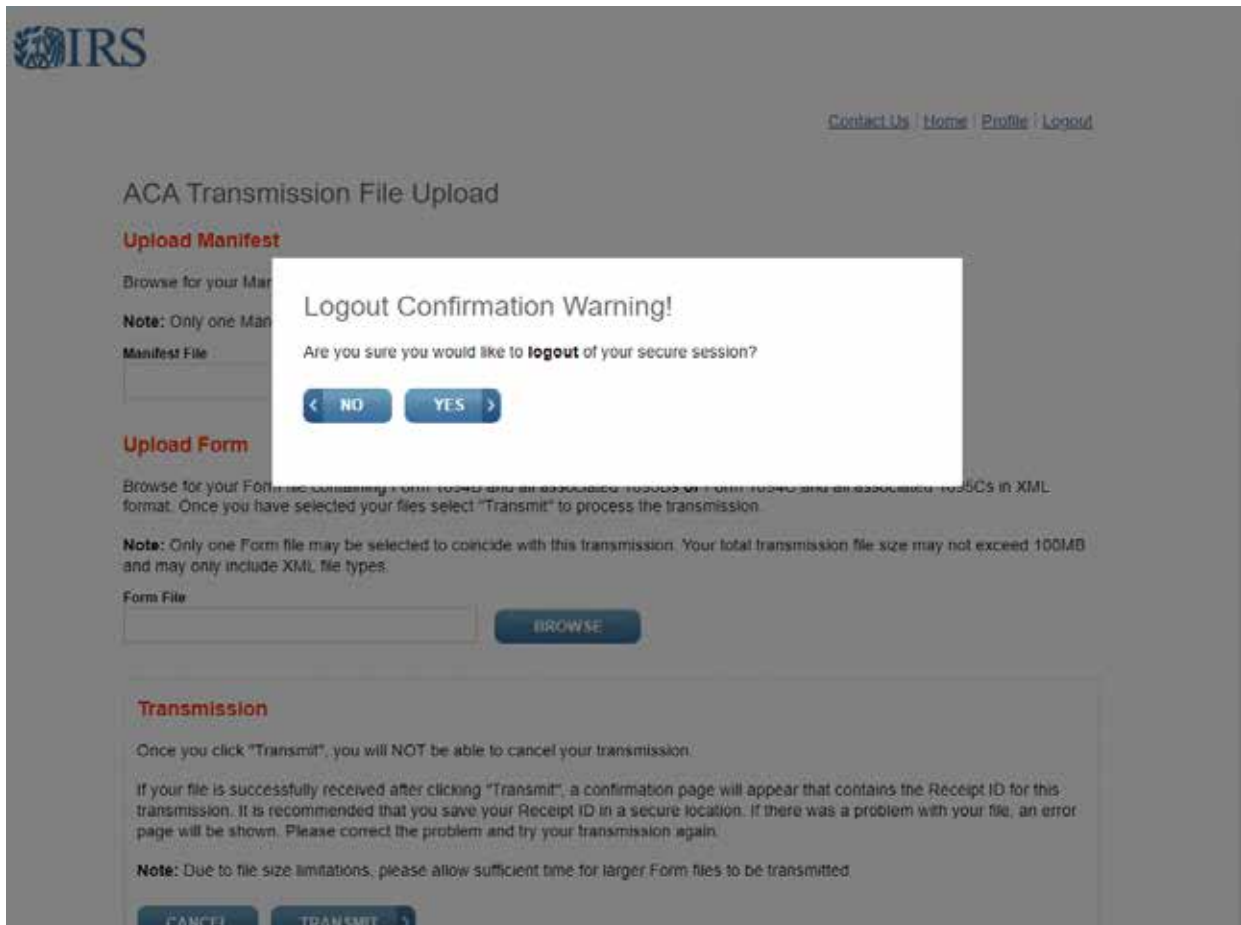

Figure 4-3: ISS-UI Channel Transmission Submission Screen

The above Transmission Cancellation Pop-up shows a cancellation warning of a UI Channel Transmission Submission Screen and the option to select the “Yes” or “No” button.

4.2.1 | Sample Manifest File

To create the Request Manifest XML file, Transmitters should use IRSACAUserInterfaceHeaderMessage.xsd schema.

There is no requirement for naming the Manifest XML file. However, the suggested way is as follows:

Manifest_<Form Data File Name (without extension)>.xml

For example: Manifest_1094B_Request XXXXX20140101T010102000Z.xml

Note that the resulting Manifest file will include both the Manifest Header and the ACA Business Header and should be ready for upload.

The following is a sample of the Manifest XML file that would be uploaded via the ISS-UI channel:

```
<?xml version="1.0" encoding="UTF-8"?>
<p:ACAUIBusinessHeader xmlns:p="urn:us:gov:treasury:irs:msg:acauibusinessheader"
xmlns:p1="urn:us:gov:treasury:irs:msg:acabusinessheader"

¹ Author replaced ty22 with tyYY - Use of generic namespace text to minimize need for Current Tax Year updates and continued document maintenance.

[illegible]

Figure 4-4: Sample Manifest File

4.2.2 | Sample Form Data File

To create the Form Data File: (1094/1095-[B,C]), Transmitters should use the following schema files:

-IRS-Form1094-1095BTransmitterUpstreamMessage.xsd
 -IRS-Form1094-1095CTransmitterUpstreamMessage.xsd

The following is a sample of the Form Data File XML file that would be uploaded via the ISS-UI channel:

```
<?xml version="1.0" encoding="UTF-8"?>
<p:Form109495BTransmittalUpstream
  xmlns:p="urn:us:gov:treasury:irs:msg:form1094-1095Btransmitterupstreammessage"

4.3 | Retrieving Acknowledgment from IRS

Transmitters must submit a request to retrieve the processing status and error detail of their transmission which is known as the Acknowledgement. To retrieve the Acknowledgement, the transmitter must provide their Transmitter Control Code (TCC) and the Receipt ID or UTID from the transmission for which they are requesting the processing status. The below screen shots are ISS-UI Channel Transmission Status Retrieval Screens depicting the Transmission Retrieval features.

The screenshot shows the IRS logo at the top left. In the top right corner, there are links: [Contact Us](#), [Home](#), [Profile](#), and [Logout](#). The main heading is "Transmission Status Record". Below this, a note states: "All fields with * are required." A paragraph follows: "Please select a search option from the drop-down list below. You may choose to search for your transmission status by using either your Transmitter Control Code (TCC) and Receipt ID or by using your Unique Transmission ID (UTID)". Under "Search Options:", there is a dropdown menu currently set to "TCC and Receipt ID". Below the dropdown are two text input fields: "TCC *" and "Receipt ID *". At the bottom of the form are two buttons: "FIND" and "CLEAR".

Figure 4-6a: Transmission Status Search Page (TCC and Receipt ID)

The screenshot shows the IRS logo at the top left. In the top right corner, there are links: [Contact Us](#), [Home](#), [Profile](#), and [Logout](#). The main heading is "Transmission Status Record". Below this, a note states: "All fields with * are required." A paragraph follows: "Please select a search option from the drop-down list below. You may choose to search for your transmission status by using either your Transmitter Control Code (TCC) and Receipt ID or by using your Unique Transmission ID (UTID)". Under "Search Options:", there is a dropdown menu currently set to "UTID". Below the dropdown is a single text input field: "UTID *". At the bottom of the form are two buttons: "FIND" and "CLEAR".

Figure 4-6b: Transmission Status Search Page (UTID)

Note: The UTID can also be used to check the status of a transmission. The Schema allows either Receipt ID or the UTID to check status.

Figure 4-8: A2A Check Status using UTID Response to Transmitter

4.4 | Transmitter IRS Form Data File Specification

Please refer to Section 3 – Composing IRS ACA Information Returns Transmission for details on composing an IRS ACA Form Data File that will be submitted by a transmitter to IRS.

4.5 | Transmitting Information Returns to IRS

In order to transmit a Form Data File through the ISS-UI channel, a transmitter must have an active IRS e-Services account, an ACA Transmitter Control Code (TCC), and must be using IRS approved software to submit returns or retrieve acknowledgements. The transmitter will be required to interactively log in to IRS web site with their web browser and invoke the appropriate URL for AIR. The application will allow transmitters to submit information returns to IRS using the following browsers:

1. Microsoft Edge
2. Firefox
3. Safari 9 (or latest supported version)
4. Chrome

The transmitter must have two XML files to submit a single transmission via the ISS-UI Channel. The Manifest file will contain information in uncompressed native XML format related to the transmitter and the transmission. The Manifest file will include the Manifest Header XML as defined by the XML Schema located at **Affordable Care Act Information Returns Schemas** in IRS-Form1094-1095BCTransmitterReqMessage.xsd file located in the MSG folder of the schema. Many of the elements in the Transmission Data File will not change from transmission to transmission and thus can be reused. Elements such as the transmitter information (TransmitterNameGrp, TransmitterForeignEntityInd, MailingAddressGrp, SoftwareID, etc.) should not change frequently, if at all. Other elements in the Manifest file are likely to change for every transmission. Elements such as the transmission information (total payer and payee counts, checksum, file byte size, document file name, etc.) will be different for every transmission. Section 4.2.1, Sample Manifest File – Manifest Header, includes the elements that are required in the Transmission Data File.

The Form Data File will contain Forms 1094/1095-B or Forms 1094/1095-C data in uncompressed native XML format relative to the Form 1094/1095 data. Once the required files are uploaded to IRS, the transmitter will receive a Receipt ID, and other information about the transmission, as part of the interactive session.

The Receipt ID does not provide proof that the transmission was either Accepted or Rejected. The Receipt ID simply provides proof that IRS received the transmission. The transmitter must retrieve their Acknowledgement using the TCC and Receipt ID or the UTID to obtain proof of acceptance or rejection.

The web interface will only accept uncompressed native XML files. Security checking (XML Threat detection, virus scanning, etc.) is performed on each file before routing to IRS back-end systems.

Transmitters that take advantage of the ISS-UI Channel to submit their transmissions will have to log into IRS from a web browser on their local systems. The URL for AIR that facilitates interaction with the transmitter community will be provided on the **Affordable Care Act Information Returns (AIR)** page and other related guidance and Job Aids produced by IRS will also be available to the transmitters on the AIR page. The ISS-UI Channel will guide the transmitters through all the steps necessary to upload the required files from their local systems.

The Form Data File that a transmitter uploads through the ISS-UI Channel must contain valid XML. Open tags must be followed by closed tags. For example, the open tag <TaxYear> must be followed by the data and the closed tag </TaxYear> (i.e., <TaxYear>2021</TaxYear>).

Empty tags should not be included in Form Data File. The Form Data File must conform to the XML Schema definitions included in the applicable xsd files. Table 4-1 maps the ACA forms to the XML Schema file names.

Table 4-1: Forms to XML Schema File Mapping

Applicable Forms	XML Schema Root Element File
Form 1094-B/1095-B	IRS-Form1094-1095BTransmitterUpstreamMessage.xsd
Form 1094-C/1095-C	IRS-Form1094-1095CTransmitterUpstreamMessage.xsd

All of the required information for a transmission will be included in the file that is uploaded, including the transmission information, the form type, the Form 1094 form elements and the Form 1095 form elements.

4.5.1 | Validation of IRS Form Data File

IRS performs security checks on the Form Data File received from the transmitter. If no security threats are detected, IRS generates the Receipt ID and returns it along with the Timestamp to the transmitter. Each Receipt ID uniquely identifies a Form Data File submitted to IRS. The TCC and Receipt ID or the UTID is used to retrieve the status of the transmission. As such, the Receipt ID returned to the transmitter should be kept with the Form Data File submitted and protected from loss or deletion.

When IRS receives the uploaded Form Data File, the following checks are performed:

- 1. The file must be free of viruses**
- 2. The file size must not exceed 100 MB**
- 3. The file must be readable by AIR**
- 4. The IRS application must be able to write the file to disk**
- 5. The file must pass XML validations**
- 6. The file must not contain comingled Forms 1094/1095-B and Forms 1094/1095-C**
- 7. UUID is verified to be unique for the TCC**
- 8. Metadata entered by the transmitter is checked for any discrepancies**
- 9. Duplicate transmission check is performed using the DocumentSystemFileNm, Checksum and TCC**
- 10. The reported checksum must match with IRS calculated checksum**

4.5.2 | Processing of IRS Form Data File

Once the file is processed, the status is made available for the transmitter to retrieve through Retrieve Acknowledgement web service described below. When errors are identified during file processing (such as read/write errors, invalid XML, etc.), the transmission is rejected and appropriate error(s) and description(s) are returned to the transmitter through the user interface. When business rule errors are identified during processing the XML Form Data File, IRS will record these error codes and their descriptions and return them in an XML Error Data File attached to the Acknowledgement message which the transmitter will retrieve. The transmitter will have an opportunity to correct the errors and resubmit the Form Data File.

4.6 | Retrieving Status of the Transmission through UI

After the transmitter successfully uploads a Form Data File and receives a Receipt ID, they will use the TCC and Receipt ID or the UTID to request the Acknowledgement for that transmission. Transmitters should wait at least 10 minutes after the Receipt ID is provided to request the Acknowledgement for a transmission. The transmitter is required to log in to IRS web site and invoke the appropriate URL provided by IRS. The transmitter shall select the option to retrieve one or more Acknowledgements from user interface. The TCC and Receipt ID or the UTID is the key information required for a transmitter to retrieve the Acknowledgement for a specific transmission. As such, when the transmitter receives the Receipt ID, it should be kept with the transmission and protected from loss or deletion.

Figure 4-9: ISS-UI Channel Transmission Status Results Screen, is showing a sample transmission status retrieved using the ISS-UI Channel Transmission Status Retrieval feature.

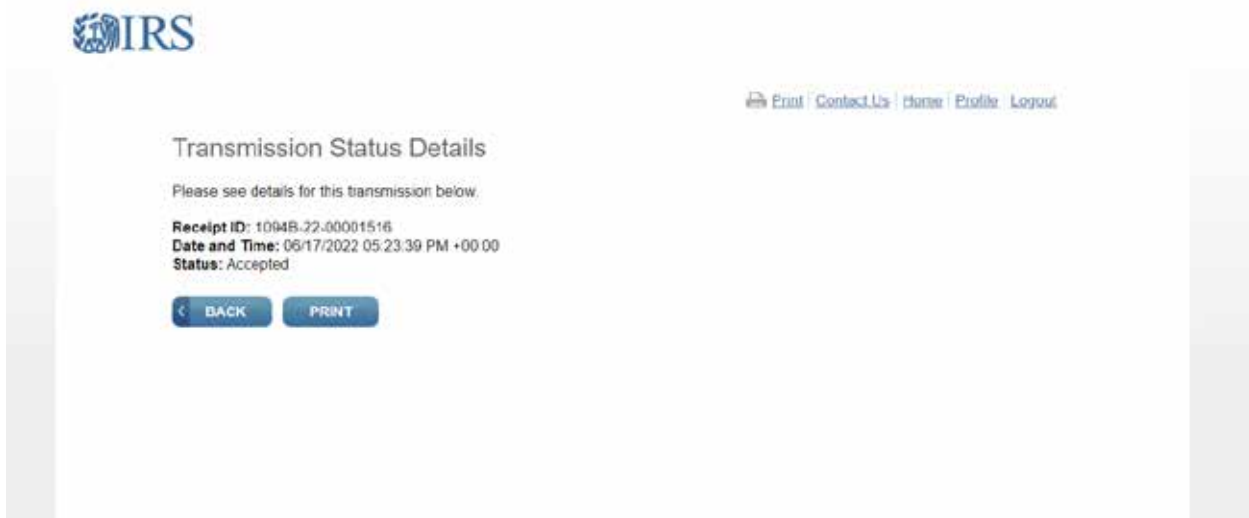

Figure 4-9: ISS-UI Channel Transmission Status Results Screen

The status of the transmission includes one of the outcomes identified in Table 4-2.

Table 4-2: Transmission Processing Status Included in Acknowledgement

Transmission Status	Description
Processing	IRS has not completed processing the transmission.
Accepted	IRS has completed processing the transmission and found no errors.
Accepted with Errors	IRS has completed processing the transmission and the errors are documented in the Error Data File attached to the Acknowledgement.

Transmission Status	Description
Partially Accepted	IRS has completed processing the transmission and has rejected at least one (but not all) of the submissions. An Error data file will be attached to the Acknowledgement File.
Rejected	IRS has rejected the transmission – depending on why the transmission was rejected, an Error Data File may or may not be attached to the Acknowledgement.
Not Found	IRS could not find a transmission corresponding to the Receipt ID provided. If the Receipt ID doesn't match with IRS generated Receipt ID, the Receipt ID doesn't belong to the Transmitter TCC.

The transmission Acknowledgement includes the status of the transmission, and if applicable, details of errors such as any business rules validation errors, and TIN validation errors that were found when IRS processed the Form Data File.

The details of errors found when IRS processed the Form Data File are included in an Error Data File that can be viewed and downloaded through the ISS-UI user-interface. The Acknowledgement includes the errors found, in XML format, during Form Data File processing. If no errors are found during processing, no Error Data File will be included with the Acknowledgement and the transmission processing status will be “Accepted”. The transmission Acknowledgement may include:

- **Unique Transmission ID (UTID) Transmitter Control Code (TCC)**
- **Shipment Number assigned to the transmission Receipt ID**
- **Form Type Code Timestamp**
- **Transmission Status Code: Processing, Partially Accepted, Accepted, Accepted with Errors, Rejected, Not Found**
- **Error Message Detail Errors (if applicable – included in the Error Data File)**

4.7 | IRS Error Data File

IRS accumulates any errors encountered during Form Data File processing in the Error Data File. As with the Form Data File 100 MB size constraint, Error Data Files are also constrained by a 200 MB size limitation. Only one Error Data File will ever be created per transmission. It is possible that the Error Data File could contain a significantly large number of errors that the 200 MB file size limitation is exceeded. In this case, while AIR will process the entire Form Data File and record all of the errors found, the Error Data File will be truncated and a message will be placed at the end of the file indicating that it was truncated. Error Data Files that exceed the 200 MB size constraint are typical of a systemic problem within the Form Data File that when addressed will substantially reduce the number of errors found. If the Transmitter has questions about errors that were truncated, they can contact the AIR Mailbox at wi.air.mailbox@irs.gov for assistance. The Error Data File is returned in ACA Assurance Testing System (AATS) and Production Environment.

The Error Data File includes the following data:

- **The identifier that uniquely identifies the record with an error (Unique Submission Identifier or Unique Record Identifier)**
- **The error message code indicating what the error is**
- **The error message text explaining what the error is**
- **The element that was in error**

Figure 4-10 provides an example of the information that will be displayed on-screen in the ISS- UI.

Note: the “Download” button that enables the transmitter to download the Error Data XML File.

Figure 4-10: Example of Acknowledgement via ISS-UI Channel

Figure 4-11 provides an example of the information that will be included in the Error Data File (which contains the error codes, the error descriptions, and the XPath reference to the element found to be in error), that can be downloaded via the ISS-UI channel.

  </ns3:FormBCTransmitterSubmissionDtl>=>
```

Figure 4-11: Error Data XML File

Note: XML structure of Error Data File and library import will always follow the TY2024 schema package.

4.8 | UI Channel TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 Schemas

Transmitters sending returns through UI Channel (AATS and Production):

- AIR will accept Tax Years 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024 for processing year 2025
 - Transmitters should use latest the TY2024 schema version to generate Forms 1094/1095-B or Forms 1094/1095-C Form Data (payload) for TY2024 returns
 - For prior year returns TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2022, TY2023 and TY2024 use the latest year schema for that tax year for the Form Data (payload).
 - Example: Transmitters should use latest TY2019 schema version to generate Forms 1094/1095-B or Forms 1094/1095-C Form Data (payload) for TY2019 returns
- Forms 1094/1095-B and Forms 1094/1095-C: Manifest element:
 - Transmitter should use Manifest schema from TY2024 schema package to generate TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 Manifest file.
 - Example: `<PaymentYr>2015</PaymentYr>` Manifest will be checked and validated against TY2024 manifest schema and business rules.

4.9 | 4.9 Calculate AttachmentByteSizeNum for TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024

Right click on Form Data File, click on “Properties” copy the size in bytes (not “Size of Disk”) and paste on Manifest element:

`<AttachmentByteSizeNum>000</AttachmentByteSizeNum>`

Section

5

Section 5 Transmitting IRS ACA Form Data File and Retrieving Acknowledgment via the ISS-A2A Channel

The ISS-A2A Channel allows transmitters to submit a Form Data File to IRS and retrieve the Acknowledgement for that transmission via a Services Oriented Architecture (SOA) interface. The Form Data File is transmitted in the SOAP Message as an MTOM attachment. The response to a request for Acknowledgement may or may not include an Error Data File. If an Error Data File is produced by AIR, it will be returned to the transmitter in the SOAP Response as an MTOM attachment. MTOM is the only method allowed by IRS for transmitters to attach files to a SOAP Message for ACA Information Returns. The purpose of this section is to describe the requirements for submitting an ACA Information Returns Form Data File to IRS using the ISS-A2A Channel.

5.1 | Message Compression

HTTP compression is used to maximize transfer efficiency and is a standard capability within the HTTP protocol. GZIP is a specific compression method defined under HTTP that is required of messages to IRS for ACA. A comprehensive explanation of the GZIP specification is provided by the Internet Engineering Task Force: <https://tools.ietf.org/html/rfc1952>.

Depending on what tool the Transmitter is using to submit the message, packaged software like SoapUI allows users to simply enable HTTP transmission compression via a setting while custom solutions would require the appropriate code. GZIP compression is required for sending transmissions via ISS-A2A Channel.

5.2 | Basic SOAP Message Structure

A SOAP message is an XML structure consisting of SOAP Envelope, SOAP Header and SOAP Body which may contain payload data or an MTOM-encoded attachment. A SOAP message starts with an XML declaration `<?xml version="1.0" encoding="UTF-8"?>`. The following section explains various sections and aspects of a SOAP message and IRS A2A web service available to the transmitters. Please be advised that this document is not intended as a tutorial and therefore covers only important aspects of a SOAP message. Please refer to www.w3.org/TR/soap/ and other authoritative websites for more information. This section describes the logical structure of basic messages with a SOAP Header and SOAP Body blocks within a SOAP Message Envelope. A SOAP message contains one SOAP Header and one SOAP Body within one SOAP Envelope. The SOAP Header contains the Web Services (WS) Addressing (WS-Addressing), WS-Security, and ACA-related business header information. The SOAP Body contains the other ACA Business Information and ACA Information Returns as MTOM-encoded attachment.

An example of the SOAP Message Structure is shown below in Figure 5-1.

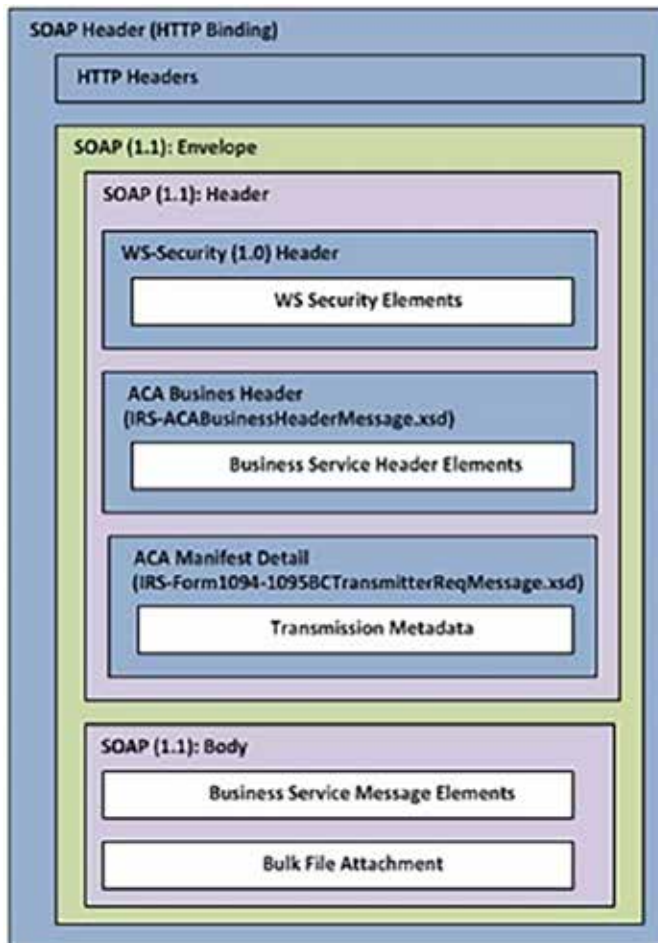

Figure 5-1: Basic SOAP Message Structure

5.2.1 | Creating the SOAP Envelope

The SOAP Envelope consists of a SOAP header and a SOAP body. The SOAP header contains information about the transmitter and the transmission and metadata about the payload in the SOAP body. The SOAP body is also referred to as the content file, Form Data File or simply payload. To create the SOAP envelope, the transmitter needs to know the following information:

- **UTID (Business Correlation ID)**
- **TCC**
- **Form Data File**
- **The content type for the SOAP Envelope with MTOM encoded attachment must be “application/xop+xml” and the contenttransfer-encoding must be 8-bit.
AttachmentByteSizeNum in Manifest should be same as size of the file.**
- **Right click on Form data file → click on “Properties” → copy the size in bytes (not “Size of disk”)**

Injection Concerns

5.2.2 | SQL Injection in the SOAP Message

The special characters listed below are treated as SQL (Structured Query Language) injections. SQL injections exploit security vulnerabilities in an application's software. SQL injections are mostly known as an attack vector for websites or A2A communication between two sources.

SQL Injections may allow attackers to spoof identity, tamper with existing data, cause repudiation issues such as voiding transactions or changing balances, allow the complete disclosure of all data on the system, or destroy the data. Characters that are not allowed due to concerns about SQL Injections are shown in this table. If needed, the escape characters shown in Table 5-1 can be used and are allowed, depending on the efile type.

Table 5-1: Characters not allowed due to SQL Injection Concerns

Character	Character Description	Character Allowed?	Escape Characters	Escape Character Allowed
&	Ampersand	Rejected (malformed check)	&	Allowed
'	Apostrophe	Rejected (sql injection check)	'	Allowed
"	Quotation Mark	Allowed	"	Allowed
--	Double Dash	Rejected (sql injection check)	Not Available	N/A
#	Hash Key	Rejected (sql injection check)	Not Available	N/A
<	Less Than	Rejected (malformed check)	<	Allowed
>	Greater Than	Allowed	>	Allowed

Note: Allowed escaped characters may be identified as a potential threat (Error Code TPE 1204) when they are used in conjunction with certain words such as “and” and “or”, as in “& or '”. If this occurs troubleshoot by removing the apostrophe.

5.3 | SOAP Header

IRS defines what should be in the SOAP header.

Basic steps to consume web service and create client:

- Get the certificate used for A2A message
- Generate and Compile the implementation class
- Deploy the WAR file. The tie classes (which are used to communicate with clients) are generated by the Application Server during deployment
- Code the client class
- Use ws import to generate and compile the stub files
- Compile the client class
- Run the client
- WS-Security – Provides mechanisms for user identification and assertions in SOAP messages
- ACA AIR Transmission Header Business Elements – Provides elements required for all SOAP messages on the A2A channel
- •CA AIR Transmission Manifest – Provides manifest elements

5.3.1 | WS-Security

ACA A2A Web Services exposed via IRS Portal comply with Web Services Security (WS-Security) specification version 1.0 for implementing end to end message security. It is an open standard published by OASIS that defines mechanisms for signing and encrypting SOAP messages and provides transport-neutral mechanisms to enforce integrity and confidentiality on messages and allows the communication of various security token formats.

WS-Security defines SOAP extensions to implement client authentication, message integrity and message confidentiality on the message level. Authentication helps identify the Sender (the transmitter). Message integrity ensures the recipient receives unaltered request. XML Signature specification ensures integrity of the message, which defines a methodology for cryptographically signing XML. Message confidentiality is to make the user sure that the data can't be read during transit. The XML Encryption specification is the basis to encrypt the parts of SOAP message including headers, body blocks, and substructures, which may be encrypted.

To consume ACA A2A web services, the transmitter must use the X.509 authentication framework with the WS-Security specification. An X.509 certificate specifies a binding between a public key and a set of attributes that includes (at least) a subject name, issuer name, serial number, and validity interval. An X.509 certificate may be used to validate a public key that may be used to verify a SOAP message element or to identify the public key with SOAP message that has been digitally signed.

5.3.1.1 | Creating the XML Signature

The signatures are defined using a <Signature> element and accompanying sub-elements as part of a security header. Note that the signature must be created after the content of the message is finalized. If changes are made to the message after the signature is created, it may result in a digest mismatch. Below is a quick overview of how to create an XML signature. Note that XML Digital Signature APIs and XML Digital

Signature libraries are also publicly available that may simplify development. An overview and tutorial can be found using the following url: <http://docs.oracle.com/javase/7/docs/technotes/guides/security/xmlsig/XMLDigitalSignature.html>

1. Determine which resources are to be signed.

2. Calculate the digest of each resource:

Each referenced resource is specified through a `<Reference>` element and its digest (calculated on the identified resource and not the `<Reference>` element itself) is placed in a `<DigestValue>` child element mentioned in the XML snippet below.

```
<ds:Reference URI="#TS-E68EBBF1696C5DD4AA143353323390073"> <ds:Transforms>
  <ds:Transform Algorithm="http://www.w3.org/2001/10/xml-exc-c14n#">
    <InclusiveNamespaces PrefixList="wsse wsa soapenv urn urn1 urn2 urn3" xmlns="http://
www.w3.org/2001/10/xml-exc-c14n#" />
  </ds:Transform>
</ds:Transforms>
<ds:DigestMethod Algorithm="http://www.w3.org/2001/04/xmlenc#sha256" /
> <ds:DigestValue>?TimestampDigestValue?</ds:DigestValue> </ds:Reference>
```

The `<DigestMethod>` element identifies the algorithm used to calculate the digest.

3. Collect the Reference elements:

Collect the `<Reference>` elements (with their associated digests) within a `<SignedInfo>` element as shown below. Note that `InclusiveNamespaces` cannot be a child element of the `CanonicalizationMethod` element.

```
<ds:SignedInfo>
  <ds:CanonicalizationMethod Algorithm="http://www.w3.org/2001/10/xml-exc-c14n#WithComments" />
<ds:SignatureMethod Algorithm="http://www.w3.org/2001/04/xmldsig-more#rsa-sha256" />
<ds:Reference URI="#TS-E68EBBF1696C5DD4AA143353323390073">
  <ds:Transforms>
    <ds:Transform Algorithm="http://www.w3.org/2001/10/xml-exc-c14n#WithComments">
      <InclusiveNamespaces PrefixList="wsse wsa soapenv urn urn1 urn2 urn3"
xmlns="http://www.w3.org/2001/10/xml-exc-c14n#WithComments" />
    </ds:Transform>
    <ds:DigestMethod Algorithm="http://www.w3.org/2001/04/xmlenc#sha256" /
    > <ds:DigestValue>?TimestampDigestValue?</ds:DigestValue>
  </ds:Reference>
  <ds:Reference URI="#id-E68EBBF1696C5DD4AA143353323390577">
    <ds:Transforms>
      <ds:Transform Algorithm="http://www.w3.org/2001/10/xml-exc-c14n#">
        <InclusiveNamespaces PrefixList="wsa soapenv urn1 urn2 urn3"
xmlns="http://www.w3.org/2001/10/xml-exc-c14n#" />
      </ds:Transform>
    </ds:Transforms>
    <ds:DigestMethod Algorithm="http://www.w3.org/2001/04/xmlenc#sha256" />
    </ds:DigestValue>?ACATransmitterManifestReqDtIDigestValue?
  </ds:Reference>
```

```

<ds:Reference URI="#id-E68EBBF1696C5DD4AA143353323390578">
  <ds:Transforms>
    <ds:Transform Algorithm="http://www.w3.org/2001/10/xml-exc-
      c14n#">
      <InclusiveNamespaces PrefixList="wsa soapenv urn urn1
        urn3" xmlns="http://www.w3.org/2001/10/xml-exc-c14n#" />
    </ds:Transform>
  </ds:Transforms>
  <ds:DigestMethod Algorithm="http://www.w3.org/2001/04/xmldc#sha256" />
  <ds:DigestValue>?ACABusinessHeaderDigestValue?</ds:DigestValue> </ds:Reference>
</ds:SignedInfo>

```

The `<CanonicalizationMethod>` element indicates the algorithm was used to canonize the `<SignedInfo>` element. Different data streams with the same XML information set may have different textual representations, e.g. differing as to whitespace. The `<SignatureMethod>` element identifies the algorithm used to produce the signature value.

4. Signing:

Calculate the digest of the `<SignedInfo>` element, sign that digest and put the signature value in a `<SignatureValue>` element.

```
<ds:SignatureValue>SignatureValue</ds:SignatureValue>
```

5. Add key information:

If keying information is to be included, place it in a `<KeyInfo>` element. Here the keying information contains the X.509 certificate for the transmitter, which would include the public key needed for signature verification.

```

<ds:KeyInfo Id="KI-E68EBBF1696C5DD4AA143353323390475">
  <wsse:SecurityTokenReference wsu:Id="STR-E68EBBF1696C5DD4AA143353323390476">
    <wsse:KeyIdentifier EncodingType="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-soapmessage-
      security-1.0#Base64Binary" ValueType="http://docs.oasis-open.org/wss/2004/01/oasis-
        200401-wss-x509-token-profile-1.0#X509v3">?CertificateValue?</wsse:KeyIdentifier>
  </wsse:SecurityTokenReference>
</ds:KeyInfo>

```

6. Enclose in a Signature element

Place the `<SignedInfo>`, `<SignatureValue>`, and `<KeyInfo>` elements into a `<Signature>` element. The `<Signature>` element comprises the XML signature.

```
<ds:Signature Id="SIG-E68EBBF1696C5DD4AA143353323390579"
  xmlns:ds="http://www.w3.org/2000/09/xmldsig#"> <ds:SignedInfo>
  <ds:CanonicalizationMethod .../
  > <ds:SignatureMethod .../>
  <ds:Reference .../>
  <ds:Reference .../>
  <ds:Reference .../>
  </ds:SignedInfo>
  <ds:SignatureValue?>SignatureValue?</ds:SignatureValue>
  <ds:KeyInfo Id="KI-E68EBBF1696C5DD4AA143353323390475" .../> </ds:Signature>
```

5.3.1.2 | ACA SOAP Header Elements to be Digitally Signed

The Header Elements in the Request SOAP Message to be digitally signed:

- **Message Type - ACAGetTransmitterBulkRequestService**
 - ACABusinessHeader
 - ACATransmitterManifestReqDtl
 - Timestamp
- **Message Type - ACAGetTransmitterBulkRequestStatus**
 - CABusinessHeader
 - ACABulkRequestTransmitterStatusDetailRequest -Timestamp

5.3.1.3 | Message Timeout

WS-Security provides the `<Timestamp>` header that can be used to record creation and expiration time of a request message. Note that the WS Timestamp must be used within 10 minutes of creation time based on GMT.

```
<wsu:Timestamp wsu:Id="TS-E68EBBF1696C5DD4AA143353323390073">
  <wsu:Created>2015-06-05T19:40:33.900Z</wsu:Created>
  <wsu:Expires>2015-06-05T19:50:33.900Z</wsu:Expires> </wsu:Timestamp>
```

5.3.1.4 | SOAP Header Examples showing Security Header and related elements

A sample of ACAGetTransmitterBulkRequestService:

NOTE: For processing year 2022, use xmlns:urn="urn:us:gov:treasury:irs:ext:aca:air:ty21" as shown in the sample on the next page.

5.3.1.5 | Digital Certificates

Digital certificates bind digital information to physical identities and provide non-repudiation and data integrity. Before you begin the enrollment process, each entity should obtain one valid digital certificate issued by an approved certificate authority (CA). Automated Enrollment only recognizes and accepts digital certificates issued by IRS approved certificate authorities, listed below. The ISS-A2A channel requires the full certificate chain including the root certificate and all CA certificates used for signing. Certificates' Key Usage attribute should list both of the values "digital signature" and "key encipherment," and no other values. A certificate can be associated with more than one TCC/ Role, and it can be used by any ACA service.

Table 5-2: IRS Authorized Certificate Issuing Authorities

Certificate Authority	Type of Certificate
ORC ECA, naming a server	Go to ORC ECA and select "Order Component/ Server Certificates". On the screen for order, please choose "Server Certificates".
IGC Medium Assurance Device, naming a device	Go to Identrust Government Agencies and click on "Buy Now", you'll see a long list of Government programs for which you can get a certificate and select "Department of Treasury - IRS MeF e-File". The type to choose is "IGC Medium Assurance Organization Identity Device".
IGC Medium Assurance Affiliated or IGC Medium Assurance Affiliated Hardware, naming an individual	Go to Identrust Government Agencies and click on "Buy Now", you'll see a long list of Government programs for which you can get a certificate and select the "Department of Treasury - IRS MeF e-File" or "Department of Treasury - IRS Secure Data Transfer". The types to choose are "IGC Medium Assurance Business Identity Hardware Storage" or "IGC Medium Assurance Organization Identity Device".

5.3.2 | ACA Transmitter Business Header Elements

Table 5-3: Transmitter Business Header Elements

Element	Description
UniqueTransmissionId	Unique identifier assigned by the transmitter to each transmission
Timestamp	The date and time (based on the local time zone of the transmitter) that the SOAP Message was created

5.3.3 | ACA AIR Transmission Manifest

The Manifest provides information about the submission and must pass validation checks before submission can be accepted. It consists of details about the transmitter and about the file transmitted.

5.4 | SOAP Body

The SOAP Body contains the request message and the Form Data File as an MTOM attachment submitted by the transmitter application. When retrieving acknowledgments, the SOAP body contains the response message, and optionally the Error Data File as an MTOM attachment, which informs the transmitter of any errors in the submissions.

5.4.1 | Message Attachment File Format

Only one Form Data File will be accepted as an attachment sent by a transmitter and, in the event errors are found during processing, only one Error Data File will be returned as an attachment by IRS to the transmitter. The Form Data File and the Error Data File will be in XML format and will be attached to the message using the W3C MTOM specification.

The Form Data File must be encoded in UTF-8 without BOM file format prior to MTOM encoding during submission. Please refer to the fault messages below.

Fault Code	Service Leg	Reason	A2A - Fault Message	UI - Fault Message
TPE1118	Request	Manifest file is using UTF-8 BOM encoding	*Error not applicable to ISS- A2A	[TPE1118] Our system has detected UTF-8 BOM encoding in the Manifest file and cannot be interpreted. Please review the XML standards outlined in Section 10
TPE1208	Request	Form file is using UTF- 8 BOM encoding	Our system has detected UTF-8 BOM encoding in the Form file and cannot be interpreted. Please review the XML standards outlined in Section 10	[TPE1208] Our system has detected UTF-8 BOM encoding in the Form file and cannot be interpreted. Please review the XML standards outlined in Section 10

5.4.2 | Message Attachment Content Type

ISS-A2A AIR web services require transmitters to use SOAP-over-HTTP messaging with MTOM to send XML data files. The file that is encoded in the MTOM attachment must be uncompressed native XML. The content type for the MTOM encoded binary object identified in the Manifest header must be “text/xml”. If the content-transfer-encoding of the Form Data File is 7-bit, “Pretty Print” formatting must be used.

5.5 | ISS-A2A Web Services Summary

Transmitters that take advantage of the A2A channel to submit their transmissions will have to program their systems to generate and transmit information returns via SOAP Messages (Request/Response). The transmitter will implement a Web Service Client on their host systems and will configure their SOAP Messages so that they are delivered to the Web Service endpoint exposed by IRS.

The SOAP Message is made up of a HTTP Header and a SOAP Envelope. The SOAP Envelope contains a SOAP Header and a SOAP Body. The XML elements in the SOAP Header facilitate transporting the information returns between the end points representing applications (Application to Application or A2A). The SOAP Header contains the URL for the Web Service endpoint exposed at IRS as well as security mechanisms for authenticating the transmitter.

The SOAP Body contains the XML elements that make up the Information Return transmission. ACA Information Return XML Schema will ensure that all required information pertaining to the transmitter and transmission is captured in corresponding XML elements. The normal processing for a transmission is as follows:

- **Transmitter sends a transmission to IRS via SOAP Request message**
- **Transmitter receives a SOAP Response message which includes the Receipt ID assigned and the status (i.e. Processing or Rejected) to the transmission by IRS**
- **IRS processes the transmission**
- **Transmitter sends a request for Acknowledgment via SOAP Request message to IRS with the Receipt ID corresponding to the transmission for which they are requesting status**
- **Transmitter receives a SOAP Response message which provides the status of the transmission (i.e., Accepted, Accepted with Errors, Rejected, Processing, Not Found, and Partially Accepted) and any errors in the Error Data File attached to the SOAP Response message.**

The *exception* path covers the following error processing:

- **Manifest errors (errors relating to transmitter information and/or transmission details)**
- **Duplicate transmissions**
- **Business Rule errors**
- **System errors**

Transmitters transmitting ACA Information Returns have two channels with which they can submit transmissions containing the information returns. IRS has directed that ACA Information Returns will be transmitted as XML documents.

Following services (service names) are available to the transmitters through ISS-A2A Channel:

- **IRS-ACASubmitService (ACAGetTransmitterBulkRequestService.wsdl) - 1095BC_Transmission**
- **IRS-ACAACKngService (ACAGetTransmitterBulkRequestStatus.wsdl) - 1095BC_Status_Request**

5.5.1 | Overview of Transmission and Submission

A transmission must consist of specific information pertaining to the transmitter and the transmission and at least one transmittal and the corresponding detail records. The transmittal information equates to the Form 1094 and the corresponding detail records equate to Form 1095.

Note that a *transmission* consists of the following:

- **Transmitter, transmission, and transmission summary information**
- **All of the Form 1094/1095 forms and summary information**

A *submission* consists of one Form 1094 and its associated Form 1095 forms and the submission summary information. A *submission* may also consist of one Form 1094-C and zero Form 1095-Cs, whenever the Form 1094-C is marked as a correction to an Authoritative Transmittal (for a previously accepted Form 1094-C). A transmission must contain at least one submission. A transmission can contain more than one submission. A transmission cannot comingle Forms 1094/1095-B and Forms 1094/1095-C.

In the example below, the text in **brown/orange** is required for A2A SOAP Transactions between two exposed Web Service endpoints and do not contain any information pertinent to the transmission. The text in **blue** are comments and have no effect on the processing of the transmission.

```
<SOAP-ENV:Envelope>
  <SOAP-ENV:Header>
    <!-- WS Addressing -->
    <!-- WS Security -->
  </SOAP-ENV:Header>
  Example of 1094B and 1095B schema
  <Form109495BTransmittalUpstream>
    <Form1094BUpstreamDetail>
      <!-- ALL TRANSMITTAL/1094B INFORMATION GOES HERE -->
    <Form1095BUpstreamDetail>
      <!-- ALL TRANSMITTAL/1095B INFORMATION GOES HERE -->
    </Form1095BUpstreamDetail>
    <Form1095BUpstreamDetail>
      <!-- ALL TRANSMITTAL/1095B INFORMATION GOES HERE -->
    </Form1095BUpstreamDetail>
    <Form1094BUpstreamDetail>
  </Form109495BTransmittalUpstream>
  Example of 1094C and 1095C schema
  <Form109495CTransmittalUpstream>
    <Form1094CUpstreamDetail>
      <!-- ALL TRANSMITTAL/1094C INFORMATION GOES HERE -->
    <Form1095CUpstreamDetail>
      <!-- ALL TRANSMITTAL/1095C INFORMATION GOES HERE -->
    </Form1095CUpstreamDetail>
  </Form109495CTransmittalUpstream>
```

```

    </Form1095CUpstreamDetail>
    <Form1094CUpstreamDetail>
    </Form109495CTransmittalUpstream>
  </SOAP-ENV:Body>
</SOAP-ENV:Envelope>

```

Figure 5-2: High Level Form schema structure

The information contained within the open element tag `<Form109495BTransmittalUpstream>` and the close element tag `</Form109495BTransmittalUpstream>` or `<Form109495CTransmittalUpstream>` and the closing element tag `</Form109495CTransmittalUpstream>` are the “as-is” transmission submitted by the transmitter. This XML will be retained in the Information Return Repository as received from the transmitter without alteration, while ensuring appropriate access controls are in place to protect the integrity of the transmission.

The information required for the transmittal and transmission is contained within the element tags `<Form109495BUpstreamDetail>` and `</Form109495BUpstreamDetail>` for Form 1094-B and Form 1095-B. The tags `<Form109495CUpstreamDetail>` and `</Form109495CUpstreamDetail>` are for Form 1094-C and Form 1095-C.

Transmitter meta-data information goes in the Manifest File and Transmittal information is in the Form Data File.

This is the information that equates to the “T” Record documented in Publication 1220, Specifications for Electronic Filing of Forms 1097, 1098, 1099, 3921, 3922, 5498, and W-2G.

The information required for the detail information (1095X) associated with each transmittal (1094X) is contained within the variable number of element tags `<Form1095BUpstreamDetail>` `</Form1095BUpstreamDetail>` and `<Form1095CUpstreamDetail>` `</Form1095CUpstreamDetail>`. This is the information that equates to the “B” Record documented in Publication 1220.

5.5.2 | IRS-ACA Submit Transmission Request Message

The *ACAGetTransmitterBulkRequestService* operation allows the transmitter to send transmissions to the web service endpoint exposed at IRS. The service name within the WSDL file is 1095BC_Transmission. The binding for the exposed web service is as follows:

```
<wsdl:binding name="BulkRequestTransmitterBinding" type="BulkRequestTransmitterPortType">
  <soapbind:binding style="document" transport="http://schemas.xmlsoap.org/soap/http"/>
  <wsp:PolicyReference URI="#Addressing"/>
  <wsdl:operation name="BulkRequestTransmitter">
    <soapbind:operation soapAction="BulkRequestTransmitter"/>
    <wsdl:input>
      <soapbind:header message="ACASecurityHeader" part="ACASecurityHeader" use="literal"/>
      <soapbind:header message="WSSESecurity" part="WSSESecurity" use="literal"/>
      <soapbind:header message="ACABusinessHeader" part="ACABusinessHeader" use="literal"/>
      <soapbind:header message="ACATransmitterManifestReqDtl" part="ACATransmitterManifestReqDtl" use="literal"/>
      <soapbind:body parts="BulkRequestTransmitter" use="literal"/>
    </wsdl:input>
    <wsdl:output>
      <soapbind:header message="ACABusinessHeader" part="ACABusinessHeader" use="literal"/>
      <soapbind:body parts="BulkRequestTransmitterResponse" use="literal"/>
    </wsdl:output>
    <wsdl:fault name="fault">
      <soapbind:fault name="fault" use="literal"/>
    </wsdl:fault>
  </wsdl:operation>
</wsdl:binding>
```

Figure 5-3: ACA Binding – ACAGetTransmitterBulkRequestService.wsdl

The SOAP Message Header in the SOAP Request message, *ACATransmitterStatusReqBody*, requires the following elements (see `<wsdl:input>` in Figure 5-3 above):

Table 5-4: Transmission SOAP Message Binding – SOAP Request Message Header

SOAP Binding – Input Header Element	SOAP Binding – Header Element Description
ACASecurityHeader	For A2A transmissions the ASID associated with the certificate must be provided in the UserID element.
WSSESecurity	Requires Signature (Signed Info, Signature Value, KeyInfo) and a Timestamp
ACABusinessHeader	Requires the Unique Transmission ID (UTID) and a Timestamp
ACATransmitterManifestReqDtl	Requires the metadata (information) pertaining to the transmitter and the transmission

The SOAP Message Body in the SOAP Request message requires the following elements:

Table 5-5: Transmission SOAP Message Binding – SOAP Request Message Body

SOAP Binding – Input Header Element	SOAP Binding – Header Element Description
BulkRequestTransmitter	Requires the BulkExchangeFile is the base64Binary MTOM encoded attachment containing the Form Data File

The SOAP Message Header in the SOAP Response message includes the following elements:

Table 5-6: Transmission SOAP Message Binding – SOAP Response Message Header

SOAP Binding – Output Header Element	SOAP Binding – Header Element Description
ACABusinessHeader	Includes the Unique Transmission ID (UTID) and a Timestamp
ACASecurityHeader	IRS Credentials for identification and authentication
WSSESecurity	Securing the message according to OASIS Standards

The SOAP Message Body in the SOAP Response message includes the following elements:

Table 5-7: Transmission SOAP Message Binding – Soap Response Message Body

SOAP Binding – Output BodyElement	SOAP Binding – Body Element Description
ACATransmitterStatusRespBody	Includes “TransmissionStatusCd”, “ReceiptId”, “irs:Err orMessageDetail”

5.5.3 | IRS-ACA Retrieve Acknowledgement Request Message

The *ACAGetTransmitterBulkRequestStatus* operation allows the transmitter to send a request for processing status and detail for transmissions they previously sent to IRS. The service name within the WSDL file is 1095BC_Status_Request. The binding for the exposed web service is as follows:

```
<wsdl:binding name="GetACATransmitterStatusReqBinding"
  type="ACATransmitterStatusReqPortType">
  <soapbind:binding style="document" transport="http://schemas.xmlsoap.org/soap/http" />
  <wsdl:operation name="GetACATransmitterStatusReqOperation">
    <soapbind:operation soapAction="RequestSubmissionStatusDetail" />
    <wsdl:input>
      <soapbind:header message="ACASecurityHeader" part="ACASecurityHeader" use="literal"/>
      <soapbind:header message="WSSESecurity" part="WSSESecurity" use="literal"/>
      <soapbind:header
        message="ACABusinessHeader"
        part="ACABusinessHeader" use="literal" />
      <soapbind:body parts="ACATransmitterStatusReqBody" use="literal" />
    </wsdl:input>
    <wsdl:output>
      <soapbind:header
        message="ACABusinessHeader"
        part="ACABusinessHeader" use="literal" />
      <soapbind:body parts="ACATransmitterStatusRespBody" use="literal" />
    </wsdl:output>
    <wsdl:fault name="fault">
      <soapbind:fault name="fault" use="literal" />
    </wsdl:fault>
  </wsdl:operation>
</wsdl:binding>
```

Figure 5-4: ACA Binding – ACAGetTransmitterBulkRequestStatus.wsdl

The SOAP Message Header in the SOAP Request message requires the following elements (see <wsdl:input> in Figure 5-4 above):

Table 5-8: Status Request SOAP Message Binding – SOAP Request Message Header

SOAP Binding – InputHeader Element	SOAP Binding – Header ElementDescription
ACASecurityHeader	For A2A transmissions the ASID associated with the certificate must be provided in the UserID element.
WSSESecurity	Requires Signature (Signed Info, Signature Value, KeyInfo) and a Timestamp
ACABusinessHeader	Requires the Unique Transmission ID (UTID) and a Timestamp

The SOAP Message Body in the SOAP Request message requires the following elements:

Table 5-9: Status Request SOAP Message Binding – SOAP Request Message Body

SOAP Binding – InputBody Element	SOAP Binding – Body ElementDescription
ACATransmitterStatusReqBody	Includes Receipt ID

The SOAP Message Header in the SOAP Request message includes the following elements:

Table 5-10: Status SOAP Message Binding – SOAP Request Message Header

SOAP Binding – Output Header Element	SOAP Binding – Header Element Description
ACASecurityHeader	For A2A transmissions the ASID associated with the certificate must be provided in the UserID element.
WSSESecurity	Requires Signature (Signed Info, Signature Value, KeyInfo) and a Timestamp
ACABusinessHeader	Requires the Unique Transmission ID (UTID) and a Timestamp

The SOAP Message Body in the SOAP Response message includes an MTOM attachment containing the following elements for each error identified during processing:

Table 5-11: Transmission SOAP Message Binding – Soap Response Message Body

SOAP Binding – Output Body Element	SOAP Binding – Body ElementDescription
BulkRequestTransmitterResponse	Includes the Unique Record Identifier, ErrorMessageCd, ErrorMessageTxt, and XpathContent

5.5.4 | A2A Channel TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 Schema/WSDL Guidance

Transmitters sending returns through A2A Channel (AATS and Production):

- AIR will accept Tax Years 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024 for Processing Year 2025
 - Transmitters should use the latest TY2024 schema version to generate Forms 1094/1095-B or Forms 1094/1095-C Form Data (payload) for TY2024 returns
 - For prior year returns TY2015, TY2016, 2017, 2018, 2019, 2020, 2021, 2022 and 2023 use the latest year schema for that tax year.
 - Example: Transmitters should use the latest TY2019 schema version to generate Forms 1094/1095-B or Forms 1094/1095-C Form Data (payload) for TY2019 returns
- Transmitters should use TY2024 schema package and deploy at their end
- Transmitters should use TY2024 WSDL's: ACAGetTransmitterBulkRequestService.wsdl to transmit TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 transmissions ACAGetTransmitterBulkRequestStatus.wsdl to check the status of TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 transmissions
- TY2024 WSDL capable to generate SOAP envelope for TY 2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 transmissions
- SOAP envelope generated by TY2024 WSDL's contained: ACA Header, WS-Security, ACA Business header and Manifest information which are same for TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 transmission (namespaces are different in payload)
- Forms 1094/1095-B and Forms 1094/1095-C: Manifest element:
- Transmitter should use Manifest schema from current tax year (TY2024) schema package to generate TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 Manifest file. Manifest will be validated against the 2024 schema.
 - Example: `<PaymentYr>2015</PaymentYr>` Manifest will be checked and validated against TY2024 manifest schema and business rules

Section

6

Section 6 Identifying Transmissions and Records

6.1 | Identifying the Transmission Type

A transmitter can submit three types of ACA transmissions to IRS:

Table 6-1: Transmission Type Codes

Type of Transmission	Description
Original Records ("O")	A transmission containing original Form 1094/1095 records
Correction Records ("C")	A transmission containing correction Form 1094/1095 records
Replace Transmission ("R")	A transmission containing original Form 1094/1095 records to replace a transmission that IRS rejected

Note: A transmission containing corrected 1094/1095 records that IRS rejected must be resubmitted with TransmissionTypeCd = "C"

The type of transmission is identified in the XML Schema in the `ACATransmitterManifestReqDtl` by the data included in the `TransmissionTypeCd` element. The `TransmissionTypeCd` element is required and the eFile Type `TransmissionTypeCdType` data must be one of the following enumerated values shown below:

```
<xsd:simpleType name="TransmissionTypeCdType">
  <xsd:annotation>
    <xsd:documentation>
      <Component>
        <DictionaryEntryNm>Transmission Type Code</DictionaryEntryNm>
        <MajorVersionNum>1</MajorVersionNum>
        <MinorVersionNum>0</MinorVersionNum>
        <VersionEffectiveBeginDt>2015-01-15</VersionEffectiveBeginDt>
        <VersionDescriptionTxt>Initial version</VersionDescriptionTxt>
        <DescriptionTxt>Transmission Type Indicates whether Transmission has Original Records,
Corrected Records, or is a Replacement</DescriptionTxt>
      </Component>
    </xsd:documentation>
  </xsd:annotation>
  <xsd:restriction base="xsd:string">
    <xsd:enumeration value="O"/>
    <xsd:enumeration value="C"/>
    <xsd:enumeration value="R"/>
  </xsd:restriction>
</xsd:simpleType>
```

A transmission consisting of original records which have not been previously submitted to IRS is coded "O".

A transmission containing corrected records consist of corrections to records that have been submitted to IRS and have been accepted by IRS is coded "C".

A transmission that replaces a rejected transmission or that contains submissions that replace rejected submissions is coded "R".

Note: Do not comingle submissions of different types (O, C, or R) in the same transmission. Each transmission must contain only one type of submission. Additionally, each submission must only contain one type of records (O, C, or R).

6.2 | Identifying the Transmission Status (Acknowledgement)

When the transmitter retrieves their Acknowledgement, the [ACABulkRequestTransmitterResponse](#) includes the XML element [TransmissionStatusCd](#) which conveys the status of the transmission. The eFile Type [TransmissionStatusCodeType](#) data conveys one of the following enumerated values shown below:

```
<xsd:simpleType name="TransmissionStatusCodeType">
  <xsd:annotation>
    <xsd:documentation>
      <Component>
        <DictionaryEntryNm>ACA Information Returns (AIR) Submission Status Type</
DictionaryEntryNm>
        <MajorVersionNum>2</MajorVersionNum>
        <MinorVersionNum>0</MinorVersionNum>
        <VersionEffectiveBeginDt>2012-09-01</VersionEffectiveBeginDt>
        <VersionDescriptionTxt>Initial version</VersionDescriptionTxt>
        <DescriptionTxt>The AIR form(s) submission status type code types.</DescriptionTxt>
        <DataElementId/>
      </Component>
    </xsd:documentation>
  </xsd:annotation>
  <xsd:restriction base="xsd:string">
    <xsd:enumeration value="Accepted"/>
    <xsd:enumeration value="Accepted with Errors"/>
    <xsd:enumeration value="Partially Accepted"/>
    <xsd:enumeration value="Rejected"/>
    <xsd:enumeration value="Processing"/>
    <xsd:enumeration value="Not Found"/>
  </xsd:restriction>
</xsd:simpleType>
```

A snippet of XML included in the Acknowledgement that will include the Transmission Status Code follows in Figure 6-1:

```
<soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/">
<soap:Header>
<acaBusHeader:ACABusinessHeader xmlns:irs="urn:us:gov:treasury:irs:common"
xmlns="urn:us:gov:treasury:irs:ext:aca:air:tyYY" xmlns:ns3="http://docs.oasis-open.org/wss/2004/01/oasis-

xmlns:ns8="urn:us:gov:treasury:irs:msg:acasecurityheader">
<TransmissionStatusCd>Processing</TransmissionStatusCd>
<irs:ReceiptId>1094B-20-00000000</irs:ReceiptId>
</acaBodyReq:ACABulkRequestTransmitterResponse>
</soap:Body>

</soap:Envelope>
```

Figure 6-1: Identifying the Transmission Status Code

All the records within a transmission have been received but not necessarily accepted for processing by IRS when the Transmission Status Code is one of either “Accepted” or “Accepted with Errors” or “Partially Accepted”.

- If the Transmission Status Code is “Accepted”, it indicates that AIR did not find any errors in any of the submissions within the transmission.
- If the Transmission Status Code is “Accepted with Errors”, the transmission and all of the records within the transmission have been accepted by IRS. However, errors identified in the transmission are expected to be corrected and submitted in another transmission where the [TransmissionTypeCd](#) element is set to “C” for corrections.
- If the Transmission Status Code is “Partially Accepted”, the IRS has successfully processed and accepted the transmission with at least one rejected submission included in the transmission, (but not all

submissions). The rejected submission must be replaced, where the `TransmissionTypeCd` element is set to “R” for replacement.

When the Transmission/Submission Status Code is “Rejected”, the transmission has been rejected and will have to be replaced where the `TransmissionTypeCd` element is set to “R” for replacement.

6.3 | Receipt ID or UTID as Basis for Uniquely Identifying Transmissions and Records

When the transmitter sends a transmission to IRS, a Receipt ID is returned to the transmitter to indicate that IRS received the transmission. The Receipt ID, along with the transmitter’s Transmitter Control Code (TCC), or the UTID is the key information required for the transmitter to retrieve the Acknowledgement (processing status and error detail) for a given transmission. The structure of the Receipt ID is as shown in Fig 6-2.

1094B-21-00001234

1094B: Form Type

21: Processing year

00001234: Unique Number

Figure 6-2: Structure of a Receipt ID

Note: The Receipt ID format for TY2017–TY2024 ACA Assurance Testing System (AATS) begins with either AATS1094B or AATS1094C. For prior year (TY2015 and TY2016) transmissions, the Receipt ID format begins with either AATS1095B or AATS1095C. The Processing Year within the Receipt ID is based on the year the transmission was filed. For example, if filed in November of 2024 and through the associated PY2025, the Receipt ID would be 24 (AATS1095B-24-00001234). If filed in January of 2025 it would remain as 24(AATS1095B-24-00001234).

The Receipt ID format for TY2024 Production transmissions (PY2025) begins with either 1094B or 1094C: (i.e., “1094B-24-00001234” or “1094C-24-00001234”). For prior year (TY2015 and TY2016) Production transmissions, the Receipt ID format begins with either 1095B or 1095C: (i.e., “1095B-PY-00001234” or “1095C-PY-00001234”).

In the sample submission response message shown below in Figure 6-3, the Receipt ID assigned to a received transmission is “1094B-PY-00000000”.

“PY” represents the processing year. In addition to uniquely identifying the transmission to both IRS and the transmitter, the Receipt ID also includes information about the type of forms contained in the transmission (in this case Forms 1094/1095-B) and the processing year) in which AIR received the transmission. The Receipt ID returned to the transmitter should be kept with the Form Data File submitted in the transmission and protected from loss or deletion.

Figure 6-3 includes a sample Response message that the transmitter would receive if they had submitted the transmission via the ISS-A2A channel. Please note that the `TransmissionStatusCd` is “Processing”. The `TransmissionStatusCd` contained in the Response message to a transmission request will either be “Processing” or “Rejected” or “Accepted” or “Accepted with Errors” or “Partially Accepted” or “Not Found”.

```

Figure 6-4: Sample AIR ISS-UI Transmission Intake Response Message

6.3.1 | Uniquely Identifying Forms 1094 within a Transmission

When the transmitter generates the Form Data File, there are XML elements included in the schema that provide for uniquely identifying submission(s) within the transmission and record(s) within the submission. A submission is identified by the Form 1094 transmittal included in the transmission. Each Form 1094 transmittal XML schema (both for Form 1094-B and for Form 1094-C) includes the XML element [SubmissionId](#) within the respective [Form1094BUpstreamDetailType](#) or [Form1094CUpstreamDetailType](#) eFile Type. The XML Schema snippet for Form 1094-C that includes the [SubmissionId](#) follows:

Figure 6-5: Submission Id is Required for Every Form 1094 in the Transmission

The [SubmissionIdType](#) eFile Type is defined in the XML Schema as a string type. The Submission ID cannot be less than 1 (one) and cannot include fractions or decimal values. The Submission ID must not be duplicated within a transmission. IRS recommends that the Submission ID start at 1 for the first Form 1094 transmittal within the transmission and increment by 1 for every subsequent Form 1094 transmittal in the transmission.

Every Form 1094 in a transmission can be uniquely identified by the XML element [UniqueSubmissionId](#) which is derived by concatenating the transmission Receipt ID generated by IRS with the Form 1094 Submission ID. For example, given the referenced Receipt ID below and a transmission from a Transmitter or Issuer that included 3 submissions, Forms 1094-B would be uniquely identified as follows:

Table 6-2: Unique Submission Identifier

Form 1094-B Transmittal SubmissionId	Form 1094-B Transmittal UniqueSubmissionId
1	1094B-PY-00000283 1
2	1094B-PY-00000283 2
3	1094B-PY-00000283 3

6.3.2 | Uniquely Identifying Forms 1095 within a Transmission

Form 1095 records within a submission are identified in the XML schema (both for Form 1095-B and for Form 1095-C) by the XML element `RecordId` within the respective `Form1095BUpstreamDetailType` or `Form1095CUpstreamDetailType` eFile Type. The XML Schema snippet for Form 1095-C that includes the `RecordId` follows:

```
<xsd:complexType name="Form1095BUpstreamDetailType">
  <xsd:annotation>
    <xsd:documentation>
      <Component>
        <DictionaryEntryNm>Form 1095-B Upstream Detail Type</DictionaryEntryNm>
        <MajorVersionNum>1</MajorVersionNum>
        <MinorVersionNum>0</MinorVersionNum>
        <VersionEffectiveBeginDt>2015-01-27</VersionEffectiveBeginDt>
        <VersionDescriptionTxt>Initial version</VersionDescriptionTxt>
        <DescriptionTxt>Form 1095-B - Health Coverage Information Return</DescriptionTxt>
      </Component>
    </xsd:documentation>
  </xsd:annotation>
  <xsd:sequence>
    <xsd:element ref="RecordId"/>
    <xsd:element ref="TestScenarioId" minOccurs="0"/>
    <xsd:element ref="CorrectedInd"/>
    <xsd:element ref="CorrectedRecordRecipientGrp" minOccurs="0"/>
    <xsd:element ref="TaxYr" minOccurs="1" maxOccurs="1"/>
    <xsd:element ref="ResponsibleIndividualGrp" minOccurs="0"/>
    <xsd:element ref="SponsoringEmployerInfoGrp" minOccurs="0"/>
    <xsd:element ref="IssuerInfoGrp" minOccurs="1" maxOccurs="1"/>
    <xsd:element ref="CoveredIndividualGrp" minOccurs="1" maxOccurs="99"/>
  </xsd:sequence>
  <xsd:attribute name="recordType" type="xsd:string" use="required"/>
  <xsd:attribute name="lineNum" type="xsd:integer" use="required"/>
  <!-- recordType and lineNum is a COTS Mandatory Element-->
</xsd:complexType>
```

Figure 6-6: Form 1094-C XML Schema Including `RecordId`

The `RecordIdType` eFile Type is defined in the XML Schema as a string type. The Record ID cannot be less than 1 (one) and cannot include fractions or decimal values. The Record ID must not be duplicated within a submission. IRS recommends that the Record ID start at 1 for the first Form 1095 within the submission and increment by 1 for every subsequent Form 1095 in the submission.

Every Form 1095 record in a submission can be uniquely identified by the XML element `UniqueRecordId` which is derived by concatenating the transmission Receipt ID, the Form 1094 Submission ID, and the Form 1095 Record ID. For example, given the above referenced Receipt ID and a transmission from a Transmitter or Issuer that included 2 submissions with a variable number of records in each submission, Forms 1095-B would be uniquely identified as follows:

Table 6-3: Unique Record Identifier

Form 1094-B Transmittal SubmissionId	Form 1095-B RecordId	Unique Identifiers UniqueSubmissionId or UniqueRecordId
1		1094B-PY-00000283 1
	1	1094B-PY-00000283 1 1
	2	1094B-PY-00000283 1 2
2		1094B-PY-00000283 2
	1	1094B-PY-00000283 2 1
	2	1094B-PY-00000283 2 2
	3	1094B-PY-00000283 2 3

6.4 | Identifying Records with Errors

When IRS records an error while processing a record, the unique identifiers described in Section 3.4.2 are used to inform the transmitter where the error occurred. Those errors are written to a file named the Error Data File. The Error Data File is attached (MTOM encoded attachment) to the SOAP Response message when the transmitter requests the status and processing detail (Acknowledgement) for the given transmission. Note: The Error Data File is returned for transmissions processed in the AATS and Production environment.

The content of the Error Data File can be found in the root element `IRS-ACABulkRequestTransmitterStatusDetailMessage.xsd` found in the MSG folder. The `ACABulkRequestTransmitterStatusDetailResponseType` eFile Type includes a single optional and unbounded XML element `TransmitterErrorDetailGrp`. The error information for each record is contained within this complex element:

Table 6-4: Error Data File Contents

Schema Constraints	XML Element	Description
Choice Elements – the applicable identifier will be included	UniqueSubmissionId	The unique identifier indicating which Form 1094 has errors
	UniqueRecordId	The unique identifier indicating which Form 1095 has errors
	SchemaErrorInfo	For informational purposes only—error information about schema
	ErrorMessageDetail	<ul style="list-style-type: none"> ■ Error message code ■ Error message description ■ Pointer to the element (and instance if applicable)

When the transmitter receives the Receipt ID for a transmission, that Receipt ID must be protected from loss or deletion and maintained with the transmission. The transmitter will have all of the information required to uniquely identify records in a transmission (the Receipt ID, the Submission IDs on Forms 1094, and the Record IDs on Forms 1095), in the event an error is detected by the transmitter or the responsible filing entity (Issuer, Employer). If errors are identified by the transmitter or filing entity, and the record has been submitted and accepted by IRS, the transmitter must use the same unique identifiers to determine the record that needs to be corrected.

6.5 | Corrections and Replacements

6.5.1 | The Correction Process

Corrections can only be made to previous transmissions that have been “Accepted”, “Accepted with Errors” or “Partially Accepted”. Transmitters should file corrections with IRS as soon as possible and furnish a copy of the corrected return to the Recipient.

Transmissions containing correction records must only contain corrections and should not include any “Original” records. Corrections may be filed for the following form types:

- Form 1095-B
- Form 1094-C, Authoritative Transmittals only
- Form 1095-C

Note: Although both the Form 1094-B and Form 1094-C are transmittal forms, the Form 1094-B is purely a transmittal document and, therefore, does not require corrections. The Form 1094-C, Authoritative Transmittal, contains additional information that may need correcting. The Form 1094-C must be submitted in a separate submission when a correction to the Form 1094-C, Authoritative Transmittal, itself is required. Otherwise, the Form 1094-C that is not the authoritative transmittal must be submitted with one or more “corrected” Forms 1095-C.

The correction process can be utilized when:

- IRS notifies the Transmitter or Issuer of one or more errors on the transmittal (Form 1094-C Authoritative Transmittal) or information returns (Forms 1095-B or Forms 1095-C) filed.
- The Transmitter or Issuer identifies one or more errors on the transmittal (Form 1094-C Authoritative Transmittal) or information returns (Forms 1095-B or Forms 1095-C) filed.
- The Employee or Covered Individual reports an error

The unique identifiers assigned by AIR allow corrections to the specific record(s), both transmittal records (Forms 1094) and information return records (Forms 1095) defined above in Section 3.

See the example and figure below illustrating multiple corrections to a single record.

For example, the Form 1094 data located in submission 10 of a transmission would have a USID as follows:

USID= 1094B-PY-00700283 | 10

The Form 1095 data located in record 2 of submission 10 of a transmission would have a URID as follows:

URID= 1094B-PY-00700283 | 10 | 2

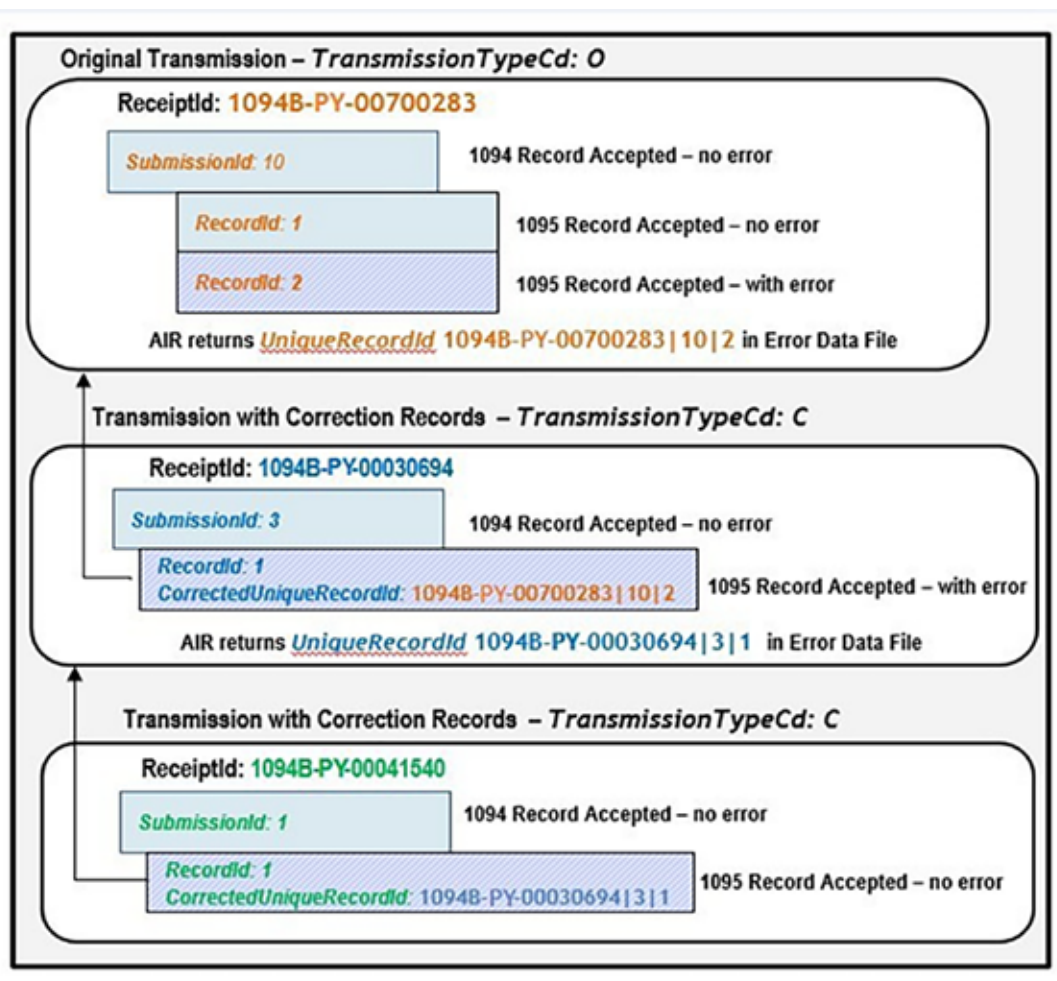

Figure 6-7: Reference Records to be Corrected

6.5.2 | Transmitting Corrections

Guidelines for transmitting corrections:

- Do not submit original and corrected documents in the same file
- If the transmission is identified as containing corrections in the Manifest (*TransmissionTypeCd* is 'C'), then the *CorrectedInd* in the Form Data File has to be set to "1" and must include either the *CorrectedUniqueSubmissionId* (if the correction is for Form 1094-C) or the *CorrectedUniqueRecordId* (if the correction is for Form 1095) which references the record that is being corrected
- If a Correction is found to be in error and needs to be corrected, submit a Correction to the most recently accepted Correction –**File only one Correction per Unique Submission ID when correcting a Form 1094-C Authoritative Transmittal or Unique Record ID when correcting a Form 1095**
- 1094-C Correction can be submitted in the same Transmission as the 1095-C Correction but must be in a separate Submission
- Correction records will carry both a "Record ID" to uniquely identify the correcting record, as well as the Unique ID of the 1094-C or 1095 Record to be corrected
 - For Form 1094-Cs use *SubmissionId* and *CorrectedUniqueSubmissionId*
 - For Form 1095-Bs and Cs use *RecordId* and *CorrectedUniqueRecordId*
- Always include the complete record for Correction; do not supply only the Corrected data elements within the correcting record. A corrected record should also include the choice between *CorrectedRecRecipientPrsnName* and *CorrectedRecRecipientName* from the record that is being corrected
- When the transmission is Accepted with Errors and the only errors identified are Manifest errors with a severity of "Report Error", these errors cannot be corrected and the messages are for informational purposes only
- The system can accept original transmissions for any tax year listed on irs.gov (2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023 and 2024), however, the system can only accept corrections for 6 tax years preceding the current year. For example, for the Filing year 2024, AIR system will accept corrections for 2017, 2018, 2019, 2020, 2021, 2022, 2023 and 2024 and not for 2015 or 2016.

6.5.3 | Transmitting Form 1094-C Corrections (Authoritative Transmittals Only)

If an original transmission requires corrections to the Form 1094-C Authoritative Transmittal, include the following (see schema and business rules):

- Populate the Form 1094-C ***CorrectedInd*** with "1"
- A ***UniqueTransmissionId*** for the transmission
- A ***TransmissionTypeCd*** in the Manifest should be "C" for corrections
- A ***SubmissionId*** (SID) for the correction Transmittal record
- The ***CorrectedUniqueSubmissionId*** (CUSID) identifying the record that is being corrected
- A ***CorrectedSubmissionPayerName*** this is the Payer Business Name from the submission (1094-C) being corrected

- The **“CorrectedSubmissionPayerTIN”** this is Payer Taxpayer Identification Number (EIN) from the submission (1094-C) being corrected
- Populate the **“AuthoritativeTransmittalInd”** with “0”.

Examples of key data fields from the original record to be corrected are the Name of ALE Member (Employer) and the Employer Identification Number (EIN).

Note: These fields are necessary to allow IRS to associate the correction record to the original record even when the Unique ID’s don’t match. Do not attach any Forms 1095-C.

Note: Please remember to mark the Corrected Form 1094-C as an “Authoritative Transmittal” and complete the entire record Parts I, II, III and if applicable Part IV (not just the Name and EIN) When correcting Form 1094-C Authoritative Transmittal entity data that also appears on associated Forms 1095-C (Name and EIN), it is not necessary to submit changes to every associated Form 1095-C in order to correct that information on the Forms 1095-C. IRS internal systems will associate appropriate entity information to existing Form 1095-C records.

6.5.4 | Transmitting Forms 1095-B or 1095-C Corrections

If an original transmission requires corrections to the Forms 1095-B and 1095-C, include the following (see schema and business rules):

- Populate the Form 1095-B or 1095-C **“CorrectedInd”** with “1”. Note: The “CorrectedInd” in the Form 1094-C should be “0”. The Form 1094-B is purely a transmittal document and, therefore, does not have a “CorrectedInd”.
- A **“UniqueTransmissionId”** for the transmission
- **“TransmissionTypeCd”** in the Manifest should be “C” for corrections
- A **“SubmissionId”** for the Transmittal (Form 1094) record
- A **“RecordId”** of the correction record
- The **“CorrectedUniqueRecordId”** (CURID) identifying the record that is being corrected
- Include the other required fields in the **“CorrectedRecordRecipientGrp”**

Elements in the CorrectedRecordRecipientGrp include Recipient Name. TIN from the original record to be corrected is optional.

- For a Form 1095-B provide the Business or Individual name
- For a Form 1095-C provide the Employee name

Note: These fields are necessary to allow IRS to associate the correction record to the original record even when the Unique ID’s don’t match.

6.5.5 | Transmitting Forms 1094-C and Forms 1095-C Corrections

If an original transmission requires corrections to both the Forms 1094-C Authoritative Transmittal and 1095-C, please file two separate transmissions.

- The **first** transmission will be to correct the Form 1094-C Authoritative Transmittal only, by following the Form 1094-C Authoritative Transmittal Correction Process outlined above.
- The **second** transmission will be to correct the Form 1095-C by following the Form 1095-C Correction Process outlined above. Only complete the accompanying Form 1094-C through the element “AuthoritativeTransmittalInd” (Line 19). Populate the “AuthoritativeTransmittalInd” with “0”. Please note: Parts II, III and IV of the Form 1094-C should not be completed.

If, after submitting a correction, IRS identifies a subsequent error, or if the Transmitter identifies a subsequent error, **you must utilize the Unique IDs associated with the correction.** See Figure 6-7 above.

Note: The original record may only be corrected once.

6.6 | Rejected Transmissions

Transmissions can be “Rejected” by both the Portal and AIR. However, the replacement process only applies to Transmissions or Submissions rejected by AIR.

6.6.1 | Transmissions Rejected by IRS Portal

When a transmission is rejected by IRS Portal, the Transmitter will receive a fault (error) code that is prefixed with ‘TPE’. The corresponding error description message will contain information

about the errors that was detected. The table of fault codes produced by IRS Portal is included in Section 12.1 of this document.

When a transmission is rejected by IRS Portal, the Transmitter must fix the problem that caused the rejection and resend the transmission. In the case where the message size is too large, the Transmitter must reduce the number of records in the Form Data File before resending the transmission.

Note: Use the same “TransmissionTypeCd” that was used when the transmission was rejected by the Portal to resubmit the file.

6.6.2 | Transmissions/Submissions Rejected by AIR

When AIR rejects the transmission due to malformed schema, missing required element or a pattern mismatch, the Error Code returned to the Transmitter will be prefixed with ‘AIRSH’.

Business rule validation provides Submission level rejections, along with Transmission level rejections. None of the records included in a transmission/submission that are rejected are maintained in IRS data stores. Thus, when a transmission or submission is rejected by AIR, a replacement transmission or submission must be submitted.

The following are reasons for a rejection at the Transmission Level or Submission Level (Forms 1094/1095-B and 1094/1095-C):

A complete Transmission can be rejected due to:

- A fatal error identified while processing the transmission metadata
- Schema validation failed on the malformed schema and schema definition
- Business rule failures at the transmission level (ex: Manifest error, Incorrect Submission ID in Form Data File)

- All Submissions within the transmission are rejected

Note: The above situation requires the Transmitters to replace the entire Transmission. The following are reasons for rejection at the Submission Level:

A Transmission can be Partially Accepted when one or more submissions, but not all, are rejected.

A Submission can be rejected due to:

- Schema validation failed on the Form Data XML File
- Business Rule Failures (ex: Form 1094 Incorrect or Missing Tax Year), which will lead to that Submission rejection (Form 1094 and its corresponding 1095 Forms).

Note: The above situation requires the Transmitters to replace only the rejected Submission(s).

6.7 | Replacement Process - Transmitting Replacements

A replacement transmission must contain all the records submitted to IRS for processing in the rejected Transmission or Submission that is being replaced. **Transmitters should submit an acceptable replacement transmission no later than 60 days after the date the rejected status of the original transmission was available.** The 60-day adjustment applies whether or not, the original transmission was received before or after the ACA Information Returns due date. When an acceptable replacement transmission is received within 60 days from the date the status was available, the file will be treated as filed on the original transmission received date. If an acceptable replacement transmission is received after the 60 days, the file will be treated as filed on the date the replacement transmission is received. In this way, any applicable late-filing penalty is calculated based on the date the transmission was received.

Note: Transmitters should wait until a transmission is processed and the Acknowledgement File status is either 'Rejected' or 'Partially Accepted' by IRS before submitting a replacement transmission or submission.

Transmitters can replace rejected Transmissions, as well as rejected Submissions. Replacements can only be transmitted for previously rejected Transmissions or Submissions. AIR requires replacements to use specific identifiers to reference the original rejected transmission/submission. When replacing a transmission, the Manifest XML Schema includes an element *“OriginalReceiptId”* which references the Receipt ID of the original transmission that is being replaced.

When replacing a submission, the Form Data File element *“OriginalUniqueSubmissionId”* is used to reference the Submission ID of the original submission that is being replaced. **When submissions are replaced, the Manifest data element “OriginalReceiptId” is not used.** Only transmissions that contained original records (*TransmissionTypeCd* is 'O') that were rejected require a replacement transmission. When a transmission, containing original records, is rejected (*TransmissionTypeCd* is 'O'), the Transmitter must fix the problem that caused the rejection and resend the transmission as a replacement (*TransmissionTypeCd* is 'R').

However, if a transmission containing correction records is rejected (*TransmissionTypeCd* is 'C'), the Transmitter must fix the problem that caused the rejection and resend the transmission (*TransmissionTypeCd* remains 'C').

An individual original submission within a transmission can be rejected by IRS in a Partially Accepted transmission. The original submission should be fixed and retransmitted in a replacement transmission (*TransmissionTypeCd* is “R”).

6.7.1 | Replacement Transmission

Replacement transmissions must include the following requirements (see schema and business rules for additional details):

- A **“UniqueTransmissionId”** for the replacement transmission
- **“TransmissionTypeCd”** in the Manifest should be “R” for replacement
- Include the **“OriginalReceiptId”** data element in the Manifest identifying the original transmission that is being replaced
- ACA Business Correlation ID (UniqueTransmissionId) in the Manifest should be unique for each transmission (UUID which is part of UTID will be checked for uniqueness against that TCC).
- **DocumentSystemFileNm** in the Manifest should match the name of the Form Data File
- **ChecksumAugmentationNum** in the Manifest should be unique for each transmission
- Replacement transmission should not include any additional replacing/new submissions

Do not:

- Include the **“OriginalUniqueSubmissionId”** in the Form Data File

6.7.1.1 | Replacing an Original Transmission that Rejected

If the original Transmission was “Rejected”, then replace the entire Transmission by using the Receipt ID from the Rejected Transmission to populate the Manifest Data element ‘*OriginalReceiptId*’ of the Replacement Transmission. Replacement transmissions must include the following requirements (see schema and business rules for additional details):

- A **“UniqueTransmissionId”** for the replacement transmission (ACA Business Correlation ID (*UniqueTransmissionId*) in the Manifest should be unique for each transmission (UUID which is part of UTID will be checked for uniqueness against that TCC)
- **“TransmissionTypeCd”** in the Manifest should be “R” for replacements
- Include the **“OriginalReceiptId”** data element identifying the original transmission that is being replaced
- **DocumentSystemFileNm** in the Manifest should match the name of the Form Data File
- **ChecksumAugmentationNum** in the Manifest should be unique for each transmission

Do not:

- Include any additional or new submissions
- Include the **“OriginalUniqueSubmissionId”** in the Form Data File
- **Try to replace individual submissions within a rejected transmission**

- Try to replace a transmission that was not rejected
- Try to replace a transmission that has been successfully replaced

6.7.1.2 | Replacing a “Replacement” Transmission that Rejected

If an original Transmission is rejected and the Replacement Transmission is also rejected, then replace the first (Earliest) rejected Transmission in the chain by populating the Manifest Data element ‘OriginalReceiptId’ with the Receipt ID that references the EARLIEST rejected Transmission in the chain. Please see Figure 6-8 for an illustration of the earliest rejected Transmission in the chain.

Replacement Transmissions must include the following requirements (see schema and business rules for additional details):

- A **“UniqueTransmissionId”** for the replacement transmission (ACA Business Correlation ID (*UniqueTransmissionId*) in the Manifest should be unique for each transmission (UUID which is part of UTID will be checked for uniqueness against that TCC)
- **“TransmissionTypeCd”** in the Manifest should be “R” for replacements
- Include the **“OriginalReceiptId”** data element identifying the Receipt ID that references the first rejected transmission, which contained a TransmissionTypeCd of “O”, in the chain
- **DocumentSystemFileNm** in the Manifest should match the name of the Form Data File
- **ChecksumAugmentationNum** in the Manifest should be unique for each transmission
- Replacement transmission should not include any additional or new submissions

Do not:

- Include the **“OriginalUniqueSubmissionId”** in the Form Data File
- Try to replace a rejected replacement transmission
- Try to replace individual submissions within a rejected transmission

- Try to replace a transmission that was not rejected
- Try to replace a transmission that has been successfully replaced

Figure 6-8 below depicts the replacement process where both the initial transmission and the first replacement attempt were rejected by AIR.

Figure 6-8: Replacing a Rejected Transmission

6.7.2 | Replacement Submission

Replacement submissions must include the following requirements (see schema and business rules for additional details):

- A ***“UniqueTransmissionId”*** for the replacement transmission
- ***“TransmissionTypeCd”*** in the Manifest should be “R” for replacement
- Include the ***“OriginalUniqueSubmissionId”*** in the Form Data File identifying the submission that is being replaced
- **Duplicate replacement Submission (s) included within the same transmission will be rejected.**
- **Replacement transmission should not include any new submissions**

Do not

- Include the ***“OriginalReceiptId”*** data element in the Manifest

6.7.2.1 | Replacing a Submission Within a Partially Accepted Transmission

If the Original Transmission was Partially Accepted, then replace the individual Submission(s) that were rejected by populating the data element ***“OriginalUniqueSubmissionId”*** in each replacement Submission (Form 1094) with the ***“UniqueSubmissionId”*** from the Submission Header of the rejected Submission(s). When filing replacement Submission(s) for submissions that were rejected within a Partially Accepted Transmission, adhere to the following requirements (see schema and business rules for additional details):

- A ***“UniqueTransmissionId”*** for the replacement transmission
- ***“TransmissionTypeCd”*** in the Manifest should be “R” for replacement
- Include the ***“OriginalUniqueSubmissionId”*** in the Form Data File identifying the submission that is being replaced from the original Partially Accepted transmission
- **Duplicate replacement Submission ID(s) included within the same transmission will be rejected.**
- **Replacement transmission should not include any new submissions**

Do not

- Include the ***“OriginalReceiptId”*** data element in the Manifest
- Submit a submission-level replacement for a transmission that was rejected

6.7.2.2 | Replacing Submission from a Partially Accepted Original Transmission when the Replacements Transmission or Submission was Rejected

If the original Transmission is Partially Accepted, and the Transmission with the replacement submissions is Rejected or Partially Accepted, then transmit another replacement transmission using the Submission IDs from the original rejected submissions. In either case always replace the first rejected submission in the chain of rejected submissions when one or more replacements are rejected. Please refer to Figures 6-9 and 6-9A.

Note: First rejected Submission(s) in the chain of rejections does not relate to the order of submissions within an individual Transmission. Figure 6-9 depicts the Submission-Replacement process where a replacement Submission was rejected.

Figure 6-9: Visual depicting the first-rejected submission in a chain of rejections that should be replaced

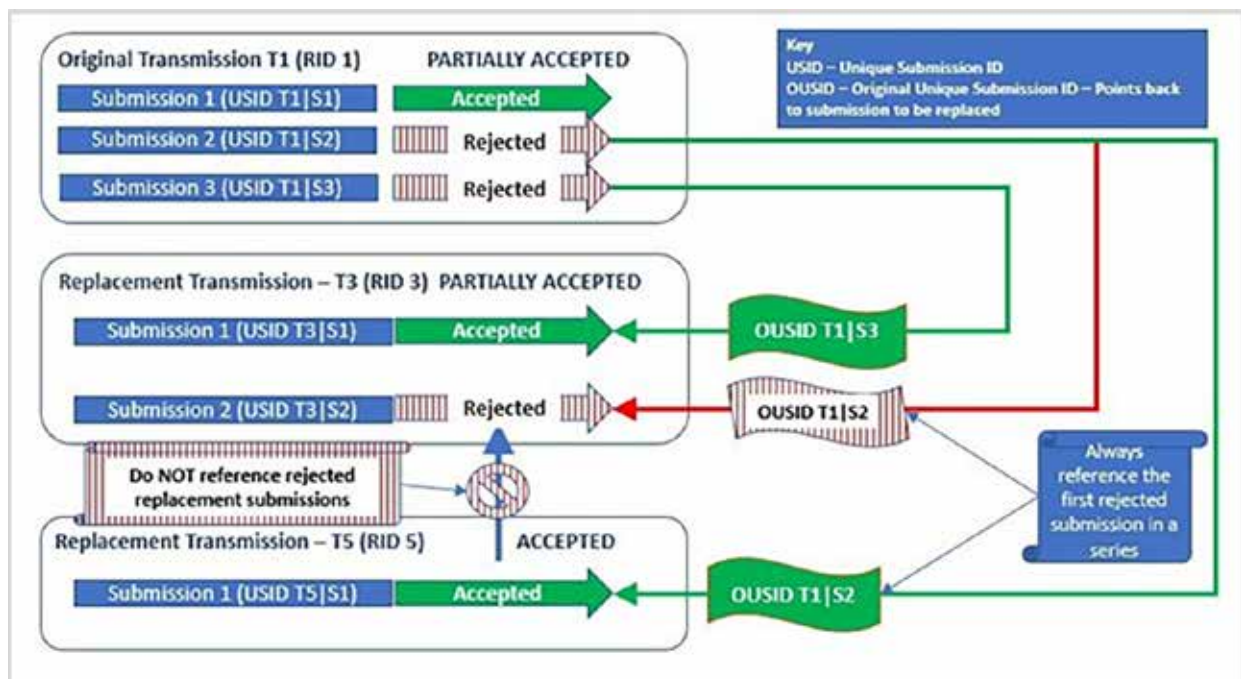

Figure 6-9A illustrates a similar situation when the entire replacement transmission was rejected

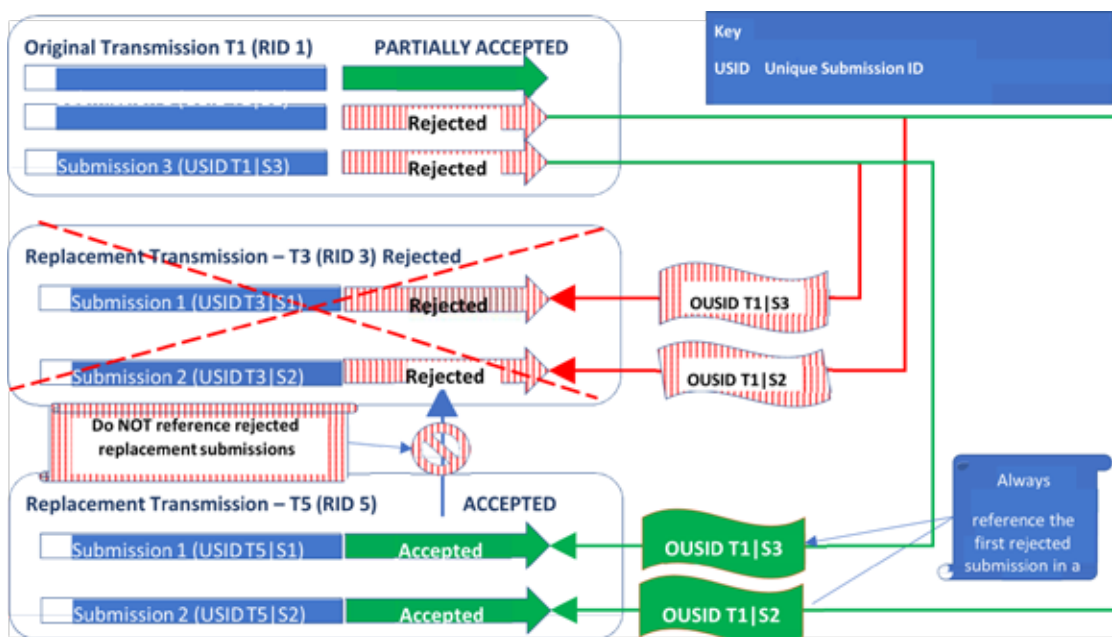

Figure 6-9A: Visual showing the first-rejected submission should be replaced when the replacement transmission is rejected

If filing a replacement Submission from a Partially Accepted Transmission where the replacement was rejected, adhere to the following requirements (see schema and business rules for additional details):

- **“UniqueTransmissionId”** for the replacement transmission
- **“TransmissionTypeCd”** in the Manifest should be “R” for replacement
- Include the **“OriginalUniqueSubmissionId”** in each replacement submission Form Data file with the Unique Submission ID from the header within the earliest rejected Submission in a sequence within a Partially Accepted Transmission that is being replaced (refer to Figures 6-9 and 6-9A)
- **Duplicate replacement Submission ID(s) included within the same transmission will be rejected.**
- **Replacement transmission should not include any new submissions**

Do not:

- Include the **“OriginalReceiptId”** data element in the Manifest
- Replace a submission within a Submission Replacement Transmission that was rejected

Section

7

Section 7 Data Mapping for ISS-UI Services/ ISS-A2A Web Services

This section provides mapping of the request and the response information exchanged between the transmitter and IRS. The mapping feeds into the request and response XML schemas for the messages. Both the request and the response schemas are incorporated into the ACA XML library.

The data mapping that follows is structured according to the asynchronous business process as follows:

- The transmitter sends a transmission with a Form Data File to IRS and receives a Receipt ID from IRS in a single synchronous session. In the ISS-A2A Channel, the synchronous session is comprised of the transmitter sending a SOAP Request message with a transmission to IRS and receiving a SOAP Response message with the Receipt ID. In the ISS-UI Channel, the synchronous session is comprised of the transmitter logging on to IRS, uploading the Transmission Data File containing information pertaining to the transmitter and the transmission, uploading the Form Data File, submitting the transmission and receiving the Receipt ID at their Web Browser.
- The transmitter sends a message with the Receipt ID associated with the transmission and receives the status and, if applicable, error detail. In the ISS-A2A Channel, the synchronous session is comprised of the transmitter sending a SOAP Request message with the Receipt ID pertaining to the transmission for which they are requesting status and receiving a SOAP Response message with the status (one of Accepted, Accepted with Errors, Partially Accepted, Rejected, Processing, Not Found) and, if errors were found during processing, the Error Data File containing the details of the errors. In the ISS-UI Channel, the synchronous session is comprised of the transmitter logging on to IRS, entering the Receipt ID and their TCC via a Web Browser and receiving the status via a web page and the capability to browse or download the Error Data File if errors were found during processing.

This section identifies the boundary data exchanged between the transmitter and IRS for the following transactions:

Transmitting the Form Data File and receiving the response
Requesting the Acknowledgement and receiving the response

This section also identifies the business data sent to IRS by a transmitter. The business data is sent to IRS in the Form Data File containing Forms 1094/1095-B and Forms 1094/1095-C XML elements.

7.1 | Data Mapping – Message Data Boundary

Tables 7-1 through 7-3 provide the data element definitions relevant to the transmission SOAP Request and SOAP Response messages.

Tables 7-4 through 7-6 provide the data element definitions relevant to the Acknowledgement request SOAP Request and SOAP Response messages.

Table 7-1: Form 1094-1095 B and C Transmission SOAP Request Header – ACA Business Header

ACABusinessHeader	Definition	XML Element Name
Unique Transmission Id	Unique Transmission Id	UniqueTransmissionId
Time stamp	Time stamp	Timestamp

Table 7-2: Form 1094-1095 B and C Transmission SOAP Request Manifest Header

ACATransmitterManifestReqDtl	Definition	XML Element Name
Payment Yr	Tax year of the filing	PaymentYr
Prior Year Data Ind	Prior Filing year Indicator	PriorYearDataInd
Employer Identification Number (EIN)	Transmitter's 9-digit EIN	EIN
Transmission Type Cd	Transmission Type Indicates whether Transmission has Original (O), Replacement (R), Corrected (C)	TransmissionTypeCd
Test File Ind	Test File Indicator	TestFileCd –'T' to be used only in AATS 'P' to be used only in PROD
Original Receipt ID	Original Receipt Identifier of the Transmission being replaced	OriginalReceiptId - (optional)
Transmitter Foreign Entity Ind	Transmitter Foreign Entity Indicator	TransmitterForeignEntityInd (optional)
Transmitter Name Grp	Global type for name of the transmitter.	TransmitterNameGrp BusinessNameLine1Txt BusinessNameLine2Txt -(optional)

7.2 | Data Mapping – Form Data Boundary

Tables 7-7 and 7-8 provide the data element definitions relevant to Issuer Reporting. Issuers include health insurance issuers, sponsors of a self-insured health plan and government agencies that administers government-sponsored health insurance programs. The Form Line Numbers are taken from the Form 1094-B and Form 1095-Bs.

Tables 7-9 and 7-10 provide the data element definitions relevant to Employer Reporting. Employers include Applicable Large Employers (ALE). The Form Line Numbers are taken from the Form 1094-C and Form 1095-C forms.

Table 7-7: Form 1094-B

Form Line Num	1094-B Data Element	Definition	XML Element Name
None	Tax Year	Tax Year being filed for	TaxYr
None		Unique submission number	SubmissionId

8.1.1 | IRS-ACASubmitService SOAP Request Message – Manifest Header (ACAGetTransmitterBulkRequestService.wsdl)

The ACABusinessHeader, WSSESecurity, ACASecurity and ACATransmitterManifestReqDtl elements are required for a SOAP request message sent by a transmitter to be sent to transmission to IRS. The root element for the Manifest Header XML Schema is found in IRS- Form1094-1095BCTransmitterReqMessage.xsd file located in the MSG folder.

See Section 7.1 for details on the ACABusinessHeader XML. See Section 5.3.1 for details on the WSSESecurity and ACASecurity XML.

8.1.3 | IRS-ACASubmitService SOAP Response Message (ACAGetTransmitterBulkRequestService.wsdl)

The following sample XML includes the Manifest Header elements required in the SOAP Response message sent by IRS to the transmitter. The SOAP Response message is returned to the transmitter as part of the synchronous session for sending transmissions to IRS. The root element for the SOAP Response message XML Schema (applies to both Forms 1094/1095-B and Forms 1094/1095-C) is found in IRS-Form1094-1095BCTransmitterRespMessage.xsd file located in the MSG folder.

Section

9

Section 9 General Philosophy on Data Elements in XML Schemas

In general, most data elements in the schemas for each form, schedule, and supporting document have been declared optional. Most of the required elements are in the schema for the SOAP message header. The schema for the SOAP message header contains identifying information about the entity filing the return, the officer responsible for the data in the return, the preparer, and the preparing firm. Hence there are very few data elements that are not required.

This philosophy of keeping most data elements optional in the schemas is consistent with the way paper returns are filed, i.e., the taxpayer and return preparer have the responsibility to provide information as specified by IRS forms, instructions, and regulations.

Section

10

Section 10 Validating a Transmission against XML Schema

10.1 | Structure of Transmission

Following is a high-level content model of a transmission XML:

```
Transmission
SOAP Envelope
SOAP Header
  ACA Business Header
  ACA Security Header
  WSSESecurity Header Manifest Header
SOAP Body
  Form Data File (MTOM Attachment)
```

See Section 12.1 for a description of the Processing Assertions, associated error codes and actions relevant to errors detected in IRS Portal that result in a rejection of the message. In these cases, AIR does not receive the transmission for processing and thus IRS does not have a record of the transmission. The Transmitter must fix the problem that resulted in the error condition and retransmit the transmission exactly as intended (i.e., Original records, Correction records, or Replacement transmission).

10.2 | Validation of Transmission

Validation of Transmission requires that the transmission, which is an XML document, complies with latest published XML schema, schema versioning rules, encoding scheme, etc. This section covers important aspects of transmission validation rules.

When entering character data into an XML document, it is important to ensure that the specified encoding supports the characters provided. By design, AIR uses Unicode Transformation Format-8 (UTF-8). AIR does not support any other encoding scheme (for example, UTF-16 and UTF-32).

Schema versions are baselined as major or minor releases. A major release is not backward compatible. That is to say, that XML documents developed against an older release of the XML Schema will not validate against the updated release of the XML Schema. A release of the XML Schema is considered major if it introduces mandatory (required) structural changes (e.g., an “optional” XML element is changed to “required” or new “required” elements are introduced).

Whereas a minor release of the XML Schema is backward compatible in that no mandatory structural changes are introduced (e.g., a “required” XML element is changed to “optional” or new “optional” XML elements are introduced).

Transmissions will be validated against the applicable major version, including all minor releases pertaining to the major version, of an XML Schema against which the XML document was generated.

Below are some XML resources regarding XML Schemas and software tools and parsers. (These resources are provided for information only—IRS is not endorsing any product.)

- W3C XML Home Page: <http://www.w3.org/XML/>
- W3C XML Schema Home Page: <http://www.w3.org/XML/Schema>
- XML Spy: <http://www.xmlspy.com/>
- Apache Xerces parser toolkit: <http://xml.apache.org/>

Note: You may choose any third-party parser toolkit or use your own.

10.3 | Validating the Transmission Envelope Including Contents

The transmission file is a MIME (Multipurpose Internet Mail Extensions) multi-part document that conforms to the “SOAP 1.1 with attachments” standard. It consists of two parts: the SOAP envelope and the SOAP attachment. The SOAP envelope maintains transmission level information, and the SOAP attachment contains the returns. MIME boundaries separate the two parts in the multi-part document.

The SOAP envelope consists of a SOAP header and a SOAP body. The SOAP header, also referred to as the *transmission header* in AIR, contains information about the transmitter and the transmission. The SOAP body, also referred to as the *transmission manifest*, contains a list of all returns included in the SOAP attachment. The following example illustrates MIME boundaries between the SOAP header, SOAP body, and SOAP attachment.

```
POST http://hostname/airp/aca/aca/1095BC-Transmission_AAT69016 HTTP/1.1
Content-Encoding: gzip
Accept-Encoding: gzip,deflate
Content-Type: multipart/related; type="application/xop+xml"; start-
="<rootpart>"; start-info="text/xml"; boundary="====
_Part_5_195420953.1451508837622"
SOAPAction: "BulkRequestTransmitter" MIME-
Version: 1.0
Host: hostname Connection: Keep-
Alive

====_Part_5_195420953.1451508837622
Content-Type: application/xop+xml; charset=UTF-8; t
ype="text/xml" Content-Transfer-Encoding: 8bit
Content-ID: <rootpart>

<soap:Envelope>
  <soap:Header>
    ...
  </soap:Header>
  <soap:Body>
    <urn4:ACABulkRequestTransmitter version="1.0">
      <urn1:BulkExchangeFile><inc:Include href="cid:1095BCTransBaseAttachment.xml">
```

```

xmlns:inc="http://www.w3.org/2004/08/xop/include"/></urn1:BulkExchangeFile>
    </urn4:ACABulkRequestTransmitter>
  </soap:Body>
</soap:Envelope>

```

====_Part_5_195420953.1451508837622

Content-Type: text/xml; charset=us-ascii **Content-Transfer-Encoding:** 7bit

Content-ID: <1095BCTransBaseAttachment.xml>

Content-Disposition: attachment; name="1095BCTransBaseAttachment.xml"

<n1:Form109495BTransmittalUpstream>. </n1:Form109495BTransmittalUpstream>

Validation of the SOAP envelope (a.k.a., transmission envelope) including its contents consist of the following steps.

1. **Validate the SOAP envelope XML instance against the SOAP schema, SOAP.xsd . The standard SOAP schema has been used without modification: <http://schemas.xmlsoap.org/soap/envelope/>.**
2. **Validate SOAP header against schema. SOAP header consists of two elements:**
 - **ACABusinessHeader - ACABatchManifestDetail****ACABusinessHeader and ACABatchManifestDetail are defined in IRS CAC.xsd file.**
3. **Validate SOAP body against schema. SOAP body consists of one element:**
 - **BulkRequestTransmitter**

- **The structure of the transmission file is checked for conformance to MIME standard, and the structure of the return data is checked to ensure that it conforms to the XML Schemas published by IRS.**
- **The return data is validated against IRS databases and checked for conformance to business rules published by IRS.**

10.4 | How Errors are Reported

When either structural violations are discovered, or the data fails one or more business rules, errors are generated and reported to the transmitter in an Error Data File when the transmitter requests the Acknowledgement for the transmission.

The headers in the transmission file are validated to ensure that their values (and their parameter values, if any) are set correctly. The content of the transmission envelope is validated to ensure that it is structurally correct (XML Schema validation per SOAP1.1) and each reference in the transmission manifest is found in the transmission file. If the transmission file structure fails XML Schema validation or violates certain fatal manifest rules published by IRS, the entire transmission is rejected. The returns included within the transmission file are NOT checked for errors in this case.

If the transmission file structure conforms to IRS manifest and manifest business rules, then each return in the transmission file is validated to make sure that the data is structurally correct and conforms to the published business rules. Structural correctness means that the data conforms to the published XML Schemas. For example, all required elements are present, and they conform to their established cardinality. Conforming to

business rules means that the relationships among the data elements hold as stated in the published business rules. When structural violations are discovered, or the data fails one or more business rules, errors are generated, persisted within AIR and reported to the transmitter in an Error Data File. AIR, performs two types of validations against a transmission:

- **Structural Validation – Conformance of XML data against the published schemas**
- **Business Rule Validation – Conformance of data to the established relationships among data elements**

As stated above, when a structural violation is discovered in the transmission file, the transmission is rejected. For example, if the ID of the transmitter (e. g., TCC) is not included in the transmission header, the transmission is rejected, and the content of the attached Form Data File is not examined.

On the other hand, when a structural violation (conformance of XML data against published schema i.e. not well-formed or missing required elements) is discovered in a return, the entire transmission or submission will be rejected with AIRSH100 error code. When the data violates a business rule that checks data against an IRS database (e.g., the UTID or TCC provided is not listed in IRS database) or when the data violates a business rule that checks for data consistency, then the return is “Accepted with Errors” or “Rejected” and errors are reported back to the transmitter in Error Data File. Errors reported to the transmitter needs to be corrected and resubmitted to IRS.

- When the transmission is Accepted with Errors and the only errors identified are Manifest errors with a severity of “Report Error”, these errors cannot be corrected, and the messages are for informational purposes only.

Section

11

Section 11 Reporting Business Rule Validation Errors

AIR will process health coverage data received via Issuer Information Returns (Forms 1094-B, Transmittal of Health Coverage Information Returns and 1095-B, Health Coverage) and Employer Information Returns (Forms 1094-C, Transmittal of Employer-Provided Health Insurance Offer and Coverage Information Returns and 1095-C, Employer-Provided Health Insurance Offer and Coverage). AIR will ensure that all data is processed according to approved requirements and validated according to IRS business rules. The business rules are applied in order to validate the received data and perform error analysis.

11.1 | Overview

The structure and content of the transmission file and each included Information Return is validated to ensure it conforms to the published structure and rules established by IRS. Structural validation includes validating a transmission against a schema which was covered in the previous section. Data validation of information returns includes validating a transmission against IRS business rules.

Sets of business rules specify the validation rules for Forms 1094/1095-B and Forms 1094/1095-C Information Returns. The business rules are tailored to accommodate unique data elements/schema items, various potential error conditions and other particulars of the ACA Information Returns.

11.2 | Data Validation and Error Reporting

IRS business rules specify the potential error conditions for each Information Return element and indicate if the error is reported (via error statement and/or code) to the transmitter. It must be noted that “faults” (described in the next section) differ from validation errors – a fault is an issue during transmission whereas a validation error is the result of business rules processing.

When data elements fail business rules, errors are generated and reported to the transmitter via a status request. Structural/Schema errors result in the transmission being rejected. Information Return Business Rule validation will result in the errors being reported to the transmitter (when requested). Rejections could occur at the submission/transmittal level (Form 1094 with associated Forms 1095) depending on the error condition.

Transmitters should not include optional XML elements if they do not have data for the elements.

11.2.1 | Processing Status

When a transmitter requests the Acknowledgement for their transmission, IRS returns one of the following statuses:

Accepted
Accepted with Errors
Partially Accepted
Rejected
Processing
Not Found

In addition, any errors that were found when the transmission was processed are provided in the Error Data File. Table 12-1 discusses the error codes and their respective descriptions.

11.2.2 | Error and Business Rule Library

The AIR Error Code Library contains the error codes and descriptions that may be returned to the transmitter and is aligned with the XML Schema and the ACA AIR Business Rules for each major and minor release TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024

Example: The AIR TY2015 Business Rules can be found on the following [irs.gov](https://www.irs.gov/efile/aca-air-business-rules) web site: AIR TY2015 Business Rules (See Business Rules Version PDF and CSV Formats).

Section

12

Section 12 SOAP Fault Response Messages

Instead of a response SOAP message, IRS may send a SOAP fault message to the transmitter if request SOAP message has a fatal error. This section describes conditions that will result in SOAP fault.

1. When the transmission through the UI or A2A transmission channel is rejected in IRS portal, there are indications that there is an error in the message pertaining to things like the SOAP envelope (Headers or Body), certain rules pertaining to the SOAP message have not been followed (such as the Form Data File exceeds the 100 MB file size constraint), the WS-Security elements are incorrect, potential XML threats have been detected either in the message or the MTOM attachment, and other possible problems.
2. A triggered SOAP fault, with a description, will be displayed on the page as applicable. The blue Download button, normally used to retrieve the error data file for the UI channel user, will not be available in this situation.

12.1 | ISS-Portal Error Codes and Messages

The error codes and messages included in Table 12-1 provide information that would be returned from IRS to the Transmitter in the event a transmission is rejected before it can be transmitted to AIR. These error codes are specifically prefixed with “TPE” to identify that the transmission was rejected before it got to AIR.

In the event a Transmitter receives one of the fault codes included in the following table, they must address the cause of the rejection and resubmit the transmission.

Table 12-1: Portal Error Codes (Fault Codes) for Tax Years 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023 and 2024

Fault Code	Service Leg	Reason	Channel	ISS Fault Message
TPE1001	Request	Message Delivery Failure	A2A	We are experiencing a technical issue. Please try your request again later. We apologize for the inconvenience.
			UI	We are experiencing a technical issue [Error Code 6052]. Please try your request again later. We apologize for the inconvenience.

Fault Code	Service Leg	Reason	Channel	ISS Fault Message
TPE1101	Request	Invalid/Incorrect Namespace	A2A UI	Our system detected invalid or outdated XML namespaces in your message. Please review the XML standards outlined in Section 3 of Publication 5258, AIR Submission Composition and Reference Guide, located at https://www.irs.gov/e-file-providers/air/affordable-care-act-information-returns-schemas , correct any issues, and try again.
				[TPE1101] Our system detected invalid or outdated XML namespaces in the Manifest file. Please review the XML standards outlined in Section 3 of Publication 5258, AIR Submission Composition and Reference Guide, correct any issues on the Manifest file, and try again.
TPE1102	Request	Service Window Closed	A2A UI	The requested service is not available at this time. Please resubmit during normal operation hours.
				*Error not applicable to ISS-UI
TPE1104	Request	Request is not compliant	A2A UI	The request is not compliant with web service policy requirements. Please review the transmission instructions outlined in Section 5. Correct any issues and try again.
				We are experiencing a technical issue [Error Code 6064]. Please try your request again later. We apologize for the inconvenience.

Fault Code	Service Leg	Reason	Channel	ISS Fault Message
TPE1105	Request	XML is not well formed	A2A	The message was not formatted properly and/or cannot be interpreted. Please review the XML standards outlined in Section 3 (fore.g. Incorrect namespace in the Manifest elements). Correct any issues and try again.
			UI	[TPE1105] Our system has detected a potential threat in the Manifest file you are attempting to transmit, and it cannot be transmitted. This may be due to malformed XML. Please review the XML standards outlined in Section 3. Correct any issues on the Manifest file and try again.
TPE1106	Request	SOAP message does not conform to WSDL	A2A	The message did not match our current WSDL and/or schema. Please see the FaultDetails information below for the particular element(s) our system has detected a potential issue with. Please review the WSDLs and published schemas located at https://www.irs.gov/e-file-providers/air/affordable-care-act-information-returns-schemas , correct any issues, and try again. Note: Invalid schema pattern or leading and trailing spaces are not allowed, will result into TPE1106 error.
			UI	[TPE1106] The manifest file does not match our current schema. In particular, our system has detected a potential issue with the following element(s): <Element1>, <Element2>, <Element3>, and others. Please review the published schemas located here https://www.irs.gov/e-file-providers/air/affordable-care-act-information-returns-schemas , correct any issues and try again.

Fault Code	Service Leg	Reason	Channel	ISS Fault Message
TPE1107	Request	Message exceeds maximum size limit of 100MB	A2A	Request message exceeds the maximum size limit. Please review the XML file standards outlined in Section 3. Correct any issues with the request and try again.
			UI	[TPE1107] The Form file exceeds the 100MB size limit. Please review the XML file standards outlined in Section 3. Correct any issues with the request and try again.
TPE1108	Request	Potential security threat	A2A	Our system has detected a potential threat in the transmission and it cannot be transmitted. Please review the XML standards outlined in Section 3. Correct any issues and try again.
			UI	[TPE1108] Our system has detected a potential threat in the Manifest file and it cannot be transmitted. Please review the XML standards outlined in Section 3. Correct any issues on the Manifest file and try again.
TPE1109	Request	Potential security threat	UI	[TPE1109] Our system has detected a potential threat in the Manifest file and it cannot be transmitted. Please review the XML standards outlined in Section 3. Correct any issues on the Manifest file and try again.
			A2A	Our system has detected a potential threat in the transmission and it cannot be transmitted. Please review the XML standards outlined in Section 3. Correct any issues and try again.

Fault Code	Service Leg	Reason	Channel	ISS Fault Message
TPE1110	Request	Potential security threat	A2A	Our system has detected a potential threat in the transmission and it cannot be transmitted. Please review the XML standards outlined in Section 3. Correct any issues and try again.
			UI	[TPE1110] Our system has detected a potential threat in the Manifest file and it cannot be transmitted. Please review the XML standards outlined in Section 3. Correct any issues on the Manifest file and try again.
TPE1112	Request	HTTP Compression Failure	A2A	The request message must be sent using HTTP compression (RFC 1952 - GZIP). Please review the transmission instructions outlined in Section 5. Correct any issues and try again.
			UI	*Error not applicable to ISS-UI
TPE1114	Request	Message not MTOM encoded	A2A	The request message must be MTOM encoded. Please review the transmission instructions outlined in Section 5. Correct any issues and try again.
			UI	*Error not applicable to ISS-UI
TPE1115	Request	Unable to decode MTOM encoded request message	A2A	We are experiencing a technical issue. Please try your request again later. We apologize for the inconvenience.
			UI	*Error not applicable to ISS-UI
TPE1118	Request	Manifest file UTF8BOM Encoded	A2A	*Error not applicable to ISS-A2A
			UI	[TPE1118] Our system has detected UTF-8 BOM encoding in the Manifest file and cannot be interpreted. Please review the XML standards outlined in Section 10. Correct any issues and try again.

Fault Code	Service Leg	Reason	Channel	ISS Fault Message
TPE1122	Request	Invalid WS Security Signature (Keystore, Password)	A2A	Our system identified an issue with the WS-Security Header in your message. Please review the WS-Security instructions outlined in Section 5 of Publication 5258, AIR Submission Composition and Reference Guide, located at https://www.irs.gov/e-file-providers/air/affordable-care-act-information-returns-schemas , correct any issues, and try again
			UI	*Error not applicable to ISS-UI
TPE1123	Request	Invalid Digital Signature (Signed Parts)	A2A	Our system identified an issue with one or more signed parts in your message. Please review the WS-Security instructions outlined in Section 5 of Publication 5258, AIR Submission Composition and Reference Guide, located at https://www.irs.gov/e-file-providers/air/affordable-care-act-information-returns-schemas , correct any issues, and try again.
			UI	*Error not applicable to ISS-UI
TPE1126	Request	Internal Authentication Failure	A2A	We are experiencing a technical issue. Please try your request again later. We apologize for the inconvenience.
			UI	We are experiencing a technical issue [Error Code 6064]. Please try your request again later. We apologize for the inconvenience.

Fault Code	Service Leg	Reason	Channel	ISS Fault Message
TPE1127	Request	Missing credentials in HTTP request	A2A	Message not formatted properly and is missing HTTP credentials. Please check message and try again.
			UI	We are experiencing a technical issue [Error Code 6064]. Please try your request again later. We apologize for the inconvenience.
TPE1128	Request	Authentication Failure	A2A	We were unable to authenticate your credentials. Please review the information about digital certificates included in Section 5. Ensure that the credentials are valid and try again.
			UI	We are experiencing a technical issue [Error Code 6064]. Please try your request again later. We apologize for the inconvenience.
TPE1129	Request	Authorization Failure	A2A	We were unable to authorize your credentials. Please review the information about digital certificates included in Section 5. Ensure that the credentials are valid and try again.
			UI	We are experiencing a technical issue [Error Code 6064]. Please try your request again later. We apologize for the inconvenience.

Fault Code	Service Leg	Reason	Channel	ISS Fault Message
TPE1130	Request	Request contains Invalid Test File Code value	A2A	Our system has detected an error with the Test File Code. Please check the message and try again. Please note that the Test File Code value of 'T' is used for AATS transmissions and the Test File Code value of 'P' is used for transmissions intended for IRS compliance processing.
			UI	[TPE1130] Our system has detected an error with the Test File Code of your Manifest file. Please check the file and try again. Please note that the Test File Code value of 'T' is used for AATS transmissions and the Test File Code value of 'P' is used for transmissions intended for IRS compliance processing.
TPE1131	Request	Request message UTID is either missing or invalid	A2A	Our system has detected an error with the Unique Transmission ID. Please review the UTID format outlined in Section 5 of Publication 5258, AIR Submission Composition and Reference Guide, located at https://www.irs.gov/e-file-providers/air/affordable-care-act-information-returns-schemas , correct any issues, and try again.
			UI	[TPE1131] Our system has detected an error with the Unique Transmission ID of your Manifest file. Please review the UTID format outlined in Section 5. Correct any issues on the Manifest file and try again.

Fault Code	Service Leg	Reason	Channel	ISS Fault Message
TPE1132	Request		A2A	Our system detected an error while validating “ChecksumAugmentationNum” value in your transmission against the calculated value of the form data file attachment. Please review Publication 5258, Section 3.4.3, Computing Checksum, linked to the AIR Program page on IRS.gov, https://www.irs.gov/e-file-providers/air/affordable-care-act-information-returns-schemas , correct the checksum value and retransmit.
			UI	[TPE1132] Our system detected an error while validating the “ChecksumAugmentationNum” value in your manifest file against the calculated value of the form data file. Please review Publication 5258, Section 3.4.3, Computing Checksum. Correct the checksum value and retransmit.
TPE1133	Request	Unable to extract UserId from Manifest	A2A	Our system has detected an error with the UserId field of the ACASecurityHeader. Please verify that your A2A Client Application System ID (ASID) is included in the UserId field. For more information, please review the UserId guidelines outlined in Section 5. of Publication 5258, AIR Submission Composition and Reference Guide, located at https://www.irs.gov/e-file-providers/air/affordable-care-act-information-returns-schemas , correct any issues, and try again.

Appendix B

14

Section 14 Appendix B - AIR Transmission Checklist (A2A) for TY2024

This checklist covers both AATS and Production Filing for Software Developers, Transmitters and Issuers

1. Preparation (Including Registration and Application)

- Did your company's responsible officials and contacts register with e-Services and complete the registration confirmation process?
- Did your company apply for and obtain a valid Transmitter Control Code (TCC)? Software ID(s)?
- Has a responsible official signed the application with the PIN created during e-Services registration and for any subsequent application modifications?
- Has your company followed the Automated Enrollment process?
 - Have you reviewed the **Publication 5308**, Automated Enrollment for ACA Providers the External Guide? Have you uploaded and registered the certificate in Automated Enrollment for A2A?
 - When registering the certificate, have you taken note of your A2A Client System ID (ASID) for future troubleshooting?
 - Have you authorized the IRS-ACASubmitService?
 - Have you authorized the IRS-ACAACKngService?
- Have you reviewed Publication 5258, 5165 and 5164? (These documents can be found on the AIR page under Resources)

2. Pre-Filing – AATS and Production

- Have you downloaded the latest versions of Schema and Business Rules? (Schemas and Business Rules can be found at **Affordable Care Act Information Returns Schemas and Business Rules**)
- Have you ensured that required Business Header data elements are present per the Schema?
- Have you ensured that required Manifest data elements are present per Schema?
 - AIR will accept Tax Years 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023 and for processing year 2024 Forms 1094/1095-B and Forms 1094/1095-C.
 - Transmitter should use Manifest schema from tax year (TY2024) schema package to generate TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 Manifest file

Example: <PaymentYr>2015</PaymentYr> Manifest will be checked and validated against TY2023 manifest schema and business rules
- Have you ensured that required 1094/1095 B/Cs Form file data elements are present per Schema?
 - Transmitters should use latest TY2024 schema version to generate Forms 1094/1095-B or Forms 1094/1095-C Form Data (payload) for TY2024 returns

For prior year returns TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022 and TY2023 use the latest year schema for that tax year.

Example: Transmitters should use latest TY2019 schema version to generate Forms 1094/1095-B or Forms 1094/1095-C Form Data (payload) for TY2019 returns

- Transmitters should use TY2015 schemas to generate Forms 1094/1095-B or Forms 1094/1095-C Form Data (payload) for TY2015 returns
- Transmitters should use TY2015 schema package and deploy at their end
- Transmitters should use TY2024 WSDL's:
- Are your manifest and data files well-formed extensible Markup Language (XML)?
- Is the composition of your XML file in line with Publication 5258?
- Is your Transmission Form File uncompressed and sized under 100 MB?
- Do you have a certificate from an approved source? (See Publication 5258 Section 5.3.1.1)
- Have you ensured that namespaces have been defined and referenced correctly (See Publication 5258 Section 5.3.1.4 for samples)?
- Have you ensured the test file indicator is correct (See Publication 5258 Section 3.4.1 Transmission XML Elements)?
- Have you ensured the UTID is set correctly per the schema and CRG specification (See Publication 5358 Section 3.4.2)?
- Checks to avoid Data Element-driven Portal (TPE) Errors
 - Have you followed the special characters guidance in **Publication 5165** that prohibits use of Hash (#) and Double-Dash (--) characters and specifies the use of HTML escaped character equivalents, (e.g., "&" for Ampersand)?
 - Have you removed any commas or periods in the 'BusinessNameLn1' or 'BusinessNameLn2' or in 'AddressLine1' or 'AddressLine2'?
 - Have you scanned your document for commented out element names, e.g., <!--urn2:ACABusinessHeader?> Note that any occurrence of double dash will trigger a potential threat error and rejection
- To avoid error "TPE1105 Message not formatted properly and/or cannot be interpreted,"
 - Have you verified HTTP Post method is used when calling web service?
 - Have you tested your sample SOAP message via a web service testing tool (e.g. SoapUI)?¹
 - Have you verified you are using the most current tax year schema in your manifest file
- To avoid "TPE1112 Request must be sent using HTTP compression," Is your Transmission Hypertext Transfer Protocol (HTTP) - compressed via gzip for A2A? (See Publication 5258, Section 5.1)
 - Is your file attachment SOAP Message Transmission Optimization Mechanism (MTOM) encoded?

¹IRS recommends that external users validate their XML files against the schemas provided by the IRS prior to submitting them to the IRS. Taking this step will help avoid discovering errors after the XML file is submitted. Performing this validation on the user end makes it easier and faster to identify and locate schema types of errors. Any tool which allows the external user to validate their XML files against the schemas, such as "Altova XML Spy" or "SoapUI" should be suitable.

- Have you downloaded the latest versions of Simple Object Access Protocol (SOAP)?
- To avoid “TPE1122 Invalid WS security header,” Have you ensured all Security Header elements are present per Schema and CRG? (See Publication 5258 section: 5.3.1.4 - SOAP Header Examples showing Security Header and related elements)
 - Have you digitally signed your Transmission for all Message Types?
 - Timestamp
 - ACABusinessHeader
 - Have you followed the format for timestamp? E.g., Added colons (:) to the timestamp and removed the milliseconds Ex: 2015-08-28T20:08:45Z
 - Have you digitally signed the following Header elements for Message Type- ACAGetTransmitterBulkRequestService?
 - ACABusinessHeader
 - ACATransmitterManifestReqDtl
 - Timestamp
- Have you digitally signed the following Header elements for Message Type -ACAGetTransmitterBulkRequestStatus?
 - ACABusinessHeader
 - ACABulkRequestTransmitterStatusDetailRequest
 - Timestamp
- Have you set CanonicalizationMethod Algorithm to <http://www.w3.org/2001/10/xml-exc-c14n#WithComments>?
- Have you set SignatureMethod Algorithm to <http://www.w3.org/2001/04/xmldsig-more#rsa-sha256>?
- Have you set each DigestMethod Algorithm to <http://www.w3.org/2001/04/xmldsig-more#sha256>?
- Have you set each Transform Algorithm <http://www.w3.org/2001/10/xml-exc-c14n#>?
- Have you included your Base64-encoded certificate in a KeyInfo element?
- Have you regenerated Timestamp for every request to avoid expiration?
- To avoid “TPE 1106 Soap message does not conform to WSDL”
 - Do you have the latest version of Web Services Definition Language (WSDL) files describing the web services? (Send email request to AIR Help Desk - 1-866-937-4130. Include your ACA TCC and Company Name)
 - Do you have the ACAGetTransmitterBulkRequestService.wsdl to transmit TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 transmissions?
 - Do you have the ACAGetTransmitterBulkRequestStatus.wsdl to check the status of TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 transmissions?
 - TY2024 WSDL capable to generate SOAP envelope for TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 transmissions
 - SOAP envelope generated by TY2024 WSDL's contained: ACA Header, WS- Security, ACA Business header and Manifest information which are same for TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 transmission (namespaces are different in payload)

- Have you verified that each value conforms to the appropriate schema version?
- If your Transmission has been rejected, have you updated your UTID? – Note that UTIDs are checked for uniqueness.
- Have you run your header and manifest and form file through an XML Schema validator (e.g. SoapUI)?²
- Do you have the AIR endpoints for Transmission and status request? Is your Transmission Form
- File encoded as UTF-8 without the Byte Order Mark (BOM)? (See Publication 5258 section 5.4.1 Message Attachment File Format)
- Have you included your ASID in the UserId element within the ACASecurityHeader? (See Publication 5258 section 5.3.1.4)

3. Transmitting to IRS – AATS

- Did you use the correct TCC, Software Developer for AATS testing and Transmitter and/or Issuer for Communication Testing?
- Did you establish a connection with ISS-A2A?
- Have you saved the 'ReceiptId' along with your copy of the Transmission as sent?
- Have you obtained a status?
- If the status for all your required test submissions is "Accepted," did you contact the help desk for confirmation and update of the TCC and/or Form Status? (Telephone Number 1-866-937-4130)
- If the status is "Accepted with Errors," Have you checked against the Scenarios and Publication 5164 and resubmitted?
- If the status is "Rejected," Have you checked against the scenarios / Publication 5164 as well as guidance above and resubmitted?

4. Transmitting to IRS – Production Environment

- Have you passed the AATS A2A Communications Test?
- Is the software you are using approved through the AATS testing process?
- Did you establish a connection with Information Submission Service (ISS)-A2A?
- Have you submitted all Transmissions?
- Do you have Forms 1094/1095-B and Forms 1094/1095-C in separate transmissions?
- Have you saved the 'ReceiptId' along with your copy of the Transmission as sent?
- Have you obtained a status?
 - If the status is "Accepted," No action required.
 - If the status is "Accepted with Errors," Have you reviewed the Error Data File to identify and correct errors?
 - If the status is "Rejected," Have you reviewed the Error Data File to identify and fix errors?
 - Did you resubmit the Transmission using the Replacement Process?

²See previous footnote.

- Have you provided the 'OriginalReceiptId' of the first-rejected Transmission?
- Was your Replacement Accepted? – If not, have you fixed and resubmitted?
- If the status is "Partially Accepted, have you reviewed the Error Data File to identify and fix errors?
 - Did you resubmit the Rejected Submission(s) using the Replacement Process?
 - Have you provided the 'OriginalUniqueSubmissionId' of the first- rejected Submission?
 - Was your Replacement Accepted? – If not, have you fixed and resubmitted?

All external partner communication will need to support encryption using TLS v1.2 or greater in accordance with Federal Information Processing Standards (FIPS) Publication 140-3. Compliant cryptography will be used for strong and secure communication between Transmitters and IRS.

Section

Appendix C

15

Section 15 Appendix C - IR Transmission Checklist (UI) for TY2024

This checklist covers both AATS and Production Filing for Software Developers, Transmitters and Issuers

1. Preparation (Including Registration and Application)

- Did your company's responsible officials and contacts register with e-Services and complete the registration confirmation process?
- Did your company apply for and receive a valid Transmitter Control Code (TCC)? Software ID(s)?
- Has a responsible official signed the application with the PIN created during e-Services registration and for any subsequent application modifications?
- Have you reviewed Publication 5258, 5165 and 5164? (These documents can be found on the AIR page under Resources.

2. Pre-Filing– AATS and Production

- Have you downloaded the latest versions of Schema and Business Rules? (Schemas and Business Rules can be found at Affordable Care Act Information Returns Schemas and Business Rules)
- Have you ensured that required Business Header data elements are present per the Schema?
- Have you ensured that required Manifest data elements are present per Schema? Forms
- 1094/1095-B and Forms 1094/1095-C: Manifest element:
 - AIR will accept Tax Years 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023 and 2024 for processing Year 2025 Forms 1094/1095-B and Forms 1094/1095-C.
 - Transmitter should use Manifest schema from current tax year (TY2024) schema package to generate TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 Manifest file

Example: <PaymentYr>2015</PaymentYr> -Manifest will be checked and validated against TY2024 manifest schema and business rules

3. Transmitters sending returns through UI Channel (AATS and Production):

- AIR will accept Tax Years 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023 and 2024 for processing Year 2025
 - Transmitters should use latest TY2024 schema version to generate Forms 1094/1095-B or Forms 1094/1095-C Form Data (payload) for TY2024 returns

For prior year returns TY2015, TY2016, TY2017, TY2018, TY2019, TY2020, TY2021, TY2022, TY2023 and TY2024 use the latest year schema for that tax year.

Example: Transmitters should use latest TY2019 schema version to generate Forms 1094/1095-B or Forms 1094/1095-C Form Data (payload) for TY2019 return

4. Calculate AttachmentByteSizeNum for TY15, TY16, TY17, TY18, TY19, TY20, TY21, TY22, TY23 and TY24:

- Have you followed the following steps:
 1. Right click on Form data file,
 2. click on “Properties”
 3. Copy the size in bytes (not “Size of disk”) and
 4. Paste on Manifest element -
`<AttachmentByteSizeNum>000</AttachmentByteSizeNum>`
- Have you ensured that required 1094/1095 B/Cs Form file data elements are present per Schema?
- Are your manifest and data files well-formed eXtensible Markup Language (XML)?
- Is the composition of your XML file in line with Publication 5258?
- Have you run your manifest and form files through an XML Schema validator?¹
- Is your Transmission Form File uncompressed and sized under 100 MB?
- Have you ensured that namespaces have been defined and referenced correctly (See Publication 5258 Section 4.2.1 sample)?
- Have you ensured the test file indicator is correct (See Publication 5258 3.4.1)?
- Have you ensured the UTID is set correctly per the schema and Publication 5258 specification (See Publication 5258 Section 3.4.2)?
- Checks to avoid Data Element-driven Portal (TPE) Errors
 - Have you followed the special characters guidance in Publication 5165 that prohibits use of Hash (#) and Double-Dash (--) characters and specifies the use of HTML escaped character equivalents, (e.g., “&” for Ampersand)?
 - Are there commas or periods in the ‘BusinessNameLn1’ or ‘BusinessNameLn2’ or in ‘AddressLine1’ or ‘AddressLine2’? If so, have you removed them?
 - Have you scanned your document for commented out element names, e.g., `<!--urn2:ACABusinessHeader>`? Note that any occurrence of double dash will trigger a potential threat error and rejection
- If your Transmission has been rejected, have you updated your UTID? – Note that UTIDs are checked for uniqueness.
- Are your Transmission Form file and Manifest file encoded as UTF-8 without the Byte Order Mark (BOM)?
- **Transmitting to IRS–AATS**
 - Did you use the correct TCC, Software Developer for AATS testing and Transmitter and/or Issuer for Communication Testing?

¹ IRS recommends that external users validate their XML files against the schemas provided by the IRS prior to submitting them to the IRS. Taking this step will help avoid discovering errors after the XML file is submitted. Performing this validation on the user end makes it easier and faster to identify and locate schema types of errors. Any tool which allows the external user to validate their XML files against the schemas, such as “Altova XML Spy” or “SoapUI” should be suitable.

- Can you clearly link the manifest of each Transmission to the data file? – for example, each Transmission could be placed in a directory
- Are you in the upload screen of AATS?
- Have you named the form file per Publication 5258 guidance?
- Have you saved the 'ReceiptId' along with your copy of the Transmission as sent?
- Have you obtained a status?
 - If the status for all your required test submissions is "Accepted," did you contact the help desk for confirmation and update of the TCC and/or Form Status? (Telephone Number 1-866-937-4130)
 - If the status is "Accepted with Errors," Have you checked against the Scenarios and Publication 5164 and resubmitted?
 - If the status is "Rejected," Have you checked against the scenarios / Publication 5164 as well as guidance above and resubmitted?

5. Transmitting to IRS–Production Environment

- Have you passed the AATS UI Communications Test?
- Is the software you are using approved through the AATS testing process?
- Can you clearly link the manifest of each Transmission to the data file? – for example, each Transmission could be placed in a directory
- Are you in the upload screen of Production –UI
- Have you named the form file per Publication 5258 guidance?
- Have you saved the 'ReceiptId' along with your copy of the Transmission as sent?
- Have you obtained a status?
 - If the status is "Accepted," No action required.
 - If the status is "Accepted with Errors," Have you reviewed the Error Data File to identify and correct errors?
 - If the status is "Rejected," Have you reviewed the Error Data File to identify and fix errors?
 - Did you resubmit the Transmission using the Replacement Process?
 - Have you provided the 'OriginalReceiptId' of the first rejected Transmission?
 - Was your Replacement Accepted? – If not, have you fixed and resubmitted?
 - If the status is "Partially Accepted, have you reviewed the Error Data File to identify and fix errors?
 - Did you resubmit the Rejected Submission(s) using the Replacement Process?
 - Have you provided the 'OriginalUniqueSubmissionId' of the first rejected Submission?
 - Was your Replacement Accepted? – If not, have you fixed and resubmitted?

¹ IRS recommends that external users validate their XML files against the schemas provided by the IRS prior to submitting them to the IRS. Taking this step will help avoid discovering errors after the XML file is submitted. Performing this validation on the user end makes it easier and faster to identify and locate schema types of errors.
